Social Psychology: Understanding Human Interaction - Robert A. Baron 1974

Ecology of the Sontecomapan Lagoon, Veracruz - Collectif 2020-11-30

Tropical coastal lagoon environments provide a number of ecosystem services, but are threatened by the pressure imposed by human activities and climatic change; these systems are particularly vulnerable because of a high demographic growth. Therefore, the understanding of their ecological behavior and the characterization of lagoon health indicators have attained importance. Under this perspective Mexican (UAM-X) and French (UMRs MIO and MARBEC) researchers have collaborated from 2011 to 2014 as part of one action of the international exchange program ECOS/ANUIES, and chose the Sontecomapan lagoon (at the Mexican state of Veracruz) as a case study. This book provides information of the ecological behavior, water quality indicators, and details of microorganisms and plankton, which due to their short life cycles and their high reactivity to environmental conditions are good.

The Reenchantment of the World - Morris Berman 1981

The Reenchantment of the World is a perceptive study of our scientific consciousness and a cogent and forceful challenge to its supremacy. Focusing on the rise of the mechanistic idea that we can know the

natural world only by distancing ourselves from it, Berman shows how science acquired its controlling position in the consciousness of the West. He analyzes the holistic, animistic tradition--destroyed in the wake of Scientific Revolution of the sixteenth and seventeenth centuries--which viewed man as a participant in the cosmos, not as an isolated observer. Arguing that the holistic world view must be revived in some credible form before we destroy our society and our environment, he explores the possibilities for a consciousness appropriate to the modern era. Ecological rather than animistic, this new world view would be grounded in the real and intimate connection between man and nature.

Published by Sinauer Associates, an imprint of Oxford University Press. **Cell Biology** - Gerald Karp 1979

Fatal Freedom - Thomas Szasz 2002-08-01

Fatal Freedom is an eloquent defense of every individual's right to choose F a voluntary death. By maintaining statutes that determine that voluntary death is not legal, Thomas Szasz believes that our society is forfeiting one of its basic freedoms and causing the psychiatric medical establishment to treat individuals in a manner that is disturbingly inhumane. Society's penchant for defining behavior it terms objectionable as a disease has created a psychiatric establishment that exerts far too much influence over how and when we choose to die. In a compelling argument that clearly and intelligently addresses one of the most significant ethical issues of our time, Szasz compares suicide to other practices that historically began as sins, became crimes, and now arc seen as mental illnesses.

bookdown - Yihui Xie 2016-12-12

bookdown: Authoring Books and Technical Documents with R Markdown presents a much easier way to write books and technical publications than traditional tools such as LaTeX and Word. The *bookdown* package inherits the simplicity of syntax and flexibility for data analysis from R Markdown, and extends R Markdown for technical writing, so that you can make better use of document elements such as figures, tables, equations, theorems, citations, and references. Similar to LaTeX, you can number and cross-reference these elements with *bookdown*. Your document can even include live examples so readers can interact with them while reading the book. The book can be rendered to multiple output formats, including LaTeX/PDF, HTML, EPUB, and Word, thus making it easy to put your documents online. The style and theme of these output formats can be customized. We used books and R primarily for examples in this book, but *bookdown* is not only for books or R. Most features introduced in this book also apply to other types of publications: journal papers, reports, dissertations, course handouts, study notes, and even novels. You do not have to use R, either. Other choices of computing languages include Python, C, C++, SQL, Bash, Stan, JavaScript, and so on, although R is best supported. You can also leave out computing, for example, to write a fiction. This book itself is an example of publishing with *bookdown* and R Markdown, and its source is fully available on GitHub.
