Backpacker - 1991-04

Backpacker brings the outdoors straight to the reader's doorstep, inspiring and enabling them to go more places and enjoy nature more often. The authority on active adventure, Backpacker is the world's first GPS-enabled magazine, and the only magazine whose editors personally test the hiking trails, camping gear, and survival tips they publish. Backpacker's Editors' Choice Awards, an industry honor recognizing design, feature and product innovation, has become the gold standard against which all other outdoor-industry awards are measured.

[Traditional Lead Climbing](#) - Heidi Pesterfield 2007-07-26

Traditional Lead Climbing is the first and only guidebook intended to teach rock climbers how to lead with gear. Unlike other types of climbing such as sport and direct-aid climbing, "trad" climbing relies on placing your own gear as you climb from the ground. It's also one of the more dangerous climbing activities, where expert guidance is a must. This invaluable guide gives step-by-step descriptions of equipment, rope management, and techniques. Dozens of close-up photos and fun yet informative drawings show situations climbers might encounter and how to deal with them. In addition to covering the basics, the book showcases the experience and wisdom of a number of world-class climbers in self-revealing sidebars.

Mental Health Policy And Practice Across Europe - Knapp, Martin 2006-12-01

This book maps the current state of policy, service provision and funding for mental health care across Europe, taking into account the differing historical contexts that have shaped both the development and the delivery of services.

Alzheimer's Disease and Air Pollution - L. Calderón-Garcidueñas 2021-05-03

Most people think of Alzheimer's disease as a condition which predominately affects elderly people, but an increasing amount of evidence indicates that in populations exposed to high concentration of air pollutants, Alzheimer's disease development and progression can be identified in pediatric and young adulthood ages. Cognitive, olfactory, gait, equilibrium and auditory alterations are seen early, thus the concept of decades-long asymptomatic period prior to clinical cognitive impairment does not apply to the millions of people exposed day in and day out to polluted environments. This book Alzheimer's Disease and Air Pollution - The Development and Progression of a Fatal Disease from Childhood and the Opportunities for Early Prevention is a compilation of work by researchers intent on revealing the links between air pollution and neurodegeneration. The book is divided into 6 sections. It includes a section describing the ways in which air pollution from traffic and tobacco smoke can damage the brain; epidemiological studies establishing a strong link between dementia and particulate matter and ozone; papers explaining the properties of pollution; and works describing the intricate pathways which transform normal neurons into ghost tangles surrounded by a devastated brain. Air pollution is complex; different pollutants, different sizes and shapes and different portals of entry, play different roles, but their capacity to damage neural tissue is abundantly illustrated in this book, which highlights the need for preventive measures to protect the millions of people currently exposed to air pollutants, and the need to ameliorate their harmful effects.

Britain and Italy in the Era of the First World War - Stefano Marcuzzi 2020-12-10

This is an important reassessment of British and Italian grand strategies during the First World War. Stefano Marcuzzi sheds new light on a hitherto overlooked but central aspect of Britain and Italy's war experiences: the uneasy and only partial overlap between Britain's strategy for imperial defence and Italy's ambition for imperial expansion. Taking Anglo-Italian bilateral relations as a special lens through which to understand the workings of the Entente in World War I, he reveals how the ups-and-downs of that relationship influenced and shaped Allied grand strategy. Marcuzzi considers three main issues – war aims, war strategy and peace-making – and examines how, under the pressure of divergent interests and wartime events, the Anglo-Italian 'traditional friendship' turned increasingly into competition by the end of the war, casting a shadow on Anglo-Italian relations both at the Peace Conference and in the interwar period.

The French Alps - Findlay Muirhead 1923

Frans Floris (1519/20-1570): Imagining a Northern Renaissance - Edward H. Wouk 2018-03-20

Frans Floris de Vriendt was among the most celebrated Netherlandish artists of the sixteenth-century, more renowned in his day than Bruegel the Elder. This book relates Floris's hybridizing art to the social, religious, and political crises reshaping his society.

Quaternary Vegetation Dynamics - Jürgen Runge 2021-11-29

This book celebrates the relaunch of the African Pollen Database, presents state-of-the-art of modern and ancient pollen data from sub-Saharan Africa, and promotes Open Access science. Pollen grains are powerful tools for the study of past vegetation dynamics because they preserve well within sedimentary deposits and have a huge diversity in ornamentation that allows different taxa to be determined. The reconstruction of past vegetation from the examination of ancient pollen records thus can be used to characterize the nature of past landscapes (e.g. abundance of forests vs. grasslands), provide insights into changes in biodiversity, and gain empirical evidence of vegetation response to climatic change and human activity. In this, the 35th Volume of "Palaeoecology of Africa", we bring together new data and extensive synthetic reviews to provide novel insights into the relationships between human evolution, human activity, climate change and vegetation dynamics during the Quaternary, the last 2.6 million years. Current and ongoing climate and land-use change is exerting pressure on modern vegetation formations and threatening the livelihoods and wellbeing of many peoples in Africa. In this book the focus is on the Quaternary because it is during this geological period that the modern vegetation formations developed into their current configurations against a backdrop of high magnitude global climate change (glacial-interglacial cycles), human evolution, and a growing human land-use footprint. In this book the latest information is presented and collated from around the African continent to parameterize past vegetation states, identify the drivers of vegetation change, and assess the vegetation resilience to change. To achieve this research from two broad themes are covered: (i) the present is the key to the past (i.e. studies which improve our understanding of modern environments so that we can better interpret evidence from the past), and (ii) the past is the key to the future (i.e. studies which unlock information on how and why vegetation changed in the past so one can better anticipate trajectories of future change). This Open Access book will provide a strong foundation for future research exploring past ecological, environmental and climatic change within Africa and the surrounding islands. The book is organized regionally (covering western, eastern, central, and southern Africa) and it contains

specialized articles focused on particular topics (such as modern pollen-vegetation relationships and fire as a driver of vegetation change), as well as regional and pan-African syntheses drawing together decades of research to assess key scientific questions (including the role of climate in driving vegetation change and the role of vegetation change in human evolution). These articles will be useful to students and teachers from high school to the highest level of university who are interested in the origins and dynamics of vegetation in Africa. Furthermore, it is also meant to provide societally relevant information that can act as an inspiration for the development of sustainable management practices for the future.

Backpacker - 1992-04

Backpacker brings the outdoors straight to the reader's doorstep, inspiring and enabling them to go more places and enjoy nature more often. The authority on active adventure, Backpacker is the world's first GPS-enabled magazine, and the only magazine whose editors personally test the hiking trails, camping gear, and survival tips they publish.
