This book will help you master the

basics and the advanced of parallel computing. What You Will Learn Synchronize multiple threads and processes to manage parallel tasks Implement message passing communication between processes to build parallel applications Program your own GPU cards to address complex problems Manage computing entities to execute distributed computational tasks Write efficient programs by adopting the event-driven programming model Explore the cloud technology with Django and Google App Engine Apply parallel programming techniques that can lead to performance improvements In Detail Parallel programming techniques are required for a developer to get the best use of all the computational resources available today and to build efficient software systems. From multi-core to GPU systems up to the distributed architectures, the high computation of programs throughout requires the use of programming tools and software libraries. Because of this, it is becoming increasingly important to know what the parallel programming techniques are. Python is commonly used as even non-experts can easily deal with its concepts. This book will teach you parallel programming techniques using examples in Python and will help you explore the many ways in which you can write code that allows more than one process to happen at once. Starting with introducing you to the world of parallel computing, it moves on to cover the fundamentals in Python. This is followed by exploring the thread-based parallelism model using the Python threading module by synchronizing threads and using locks, mutex, semaphores queues, GIL, and the thread pool. Next you will be taught about

process-based parallelism where you will synchronize processes using message passing along with learning about the performance of MPI Python Modules. You will then go on to learn the asynchronous parallel programming model using the Python asyncio module along with handling exceptions. Moving on, you will discover distributed computing with Python, and learn how to install a broker, use Celery Python Module, and create a worker. You will also understand the StarCluster framework, Pycsp, Scoop, and Disco modules in Python. Further on, you will learn GPU programming with Python using the PyCUDA module along with evaluating performance limitations. Next you will get acquainted with the cloud computing concepts in Python, using Google App Engine (GAE), and building your first application with GAE. Lastly, you will learn about grid computing concepts in Python and using PyGlobus toolkit, GFTP and GASS COPY to transfer files, and service monitoring in PyGlobus. Style and approach A step-by-step guide to parallel programming using Python, with recipes accompanied by one or more programming examples. Warm Beer, Lousy Food - John S. Columbia 2009-12

The line began forming after eight o'clock. Sal, short and heavy-set, kept everyone busy. Neat, in a white shirt and sports jacket, with his grey fedora cocked to the side, his crooked grin made you smile. Without warning the heavy door would swing open and the waiters would come outside to join him. They were dressed in pajamas or prison garb, with hats and horns, and were there to warm up the crowd. Some in line expected this, others were shocked. The pink polka dot building should have been a warning. Complete strangers in line became chummy,

exchanging stories they had heard; toilet seat covers to serve drinks on, microphones in the ladies room, toilet paper for napkins. Most had brought their friends there to be roasted. The line of people varied in age. They all dressed casually because they'd heard you could get a pie in the face or a squirt in the eye. The club's routines were blue in color, but harmless. If you were lucky you might see a "Balls for the Queen" or a "Singing beer." The price was always right for a good time and Warm Beer and Lousy Food was the place to be.

Daughter of a country music star, Carole Sturtzel, she is one of the most popular country singer-songwriters in Australia today. This is the story of her life - in her own words. At fourteen, Beccy was performing in her mother's group, Wild Oats. By her late teens, Beccy had teamed up with the Dead Ringer Band - Kasey Chambers' family band - and had attracted the attention of the country music world by winning the Star Maker quest: the same award that started the careers of Keith Urban, Lee Kernaghan, James Blundell and Gina Jeffreys. It was just the first of many

awards and accolades for this multitalented woman with a big heart. With refreshing candour, Beccy shares her story: leaving everything she knew to pursue her dream, making a name for herself with her own band; her marriage and motherhood; her subsequent divorce, becoming a single mother and maintaining the nurturing love of family. Performing for the Australian troops in Afghanistan. Coming out, and what it has meant for her and her fans. Taking control of her own life - and finding love. Dodging Elephants - J. Fred Bucy 2014

Dodging Elephants tells the story of how a contented teenage soda jerk from Tahoka, Texas, with no plan for his future, found his way to higher education, landed a research job at Texas Instruments, and, over three decades, helped move that company from a small, oil-searching firm to a worldwide electronics giant. From the start J. Fred Bucy was a tireless, driven manager who turned failures into successes. Taking on TI's government equipment division in 1963, he successfully championed ingenious new designs. In 1967 he moved to the company's volatile,

ever-expanding semiconductor division, establishing factories worldwide. Meanwhile, he had become an influential advisor on U.S. government export regulation. By 1976, when TI was competing in the consumer market, he was the company's president. Bucy left TI in 1985 after a brief term as CEO. His autobiography is rich in anecdotes and unsparingly honest.

Growing up on the rural South Plains of Texas in the years of the Great Depression, Dust Bowl, and World War II, Fred Bucy learned the value of self-reliance and hard work. He seemed headed for a farming career when his life took an abrupt turn. Against substantial odds, and with a family to support, he earned two degrees in Physics and, in 1953, joined a young but promising company, Texas Instruments Incorporated. For the next thirty years he played a major role in TI's phenomenal growth and history-making innovation, moving steadily upward, becoming TI's president in 1976 and its CEO in 1984. It was a tough climb. Along the way he successfully managed a variety of brilliant, often endangered projects including digital computers, sophisticated weaponry, and complex semiconductors, playing a crucial role in the explosive, worldwide expansion of microchip technology.
