#1 New York Times Bestseller!

In the second book of the Carve the Mark duology, globally bestselling Divergent author Veronica Roth reveals how Cyra and Akos fulfill their fates. The Fates Divide is a richly imagined tale of hope and resilience told in four stunning perspectives. The lives of Cyra Noavek and Akos Kereseth are ruled by their fates, spoken by the oracles at their births. The fates, once determined, are inescapable. Akos is in love with Cyra, in spite of his fate: He will die in service to Cyra's family. And when Cyra's father, Lazmet Noavek—a soulless tyrant, thought to be dead—reclaims the Shotet throne, Akos believes his end is closer than ever. As Lazmet ignites a barbaric war, Cyra and Akos are desperate to stop him at any cost. For Cyra, that could mean taking the life of the man who may—or may not—be her father. For Akos, it could mean giving his own. In a stunning twist, the two will discover how fate defines their lives in ways

most unexpected. Providing an elementary introduction to analytic continuation and monodromy, the first part of this volume applies these notions to the local and global study of complex linear differential equations, their formal solutions at singular points, their monodromy and their differential Galois groups. The Riemann-Hilbert problem is discussed from Bolibrukh's point of view. The second part expounds 1-summability and Ecalle's theory of resurgence under fairly general conditions. It contains numerous examples and presents an analysis of the singularities in the Borel plane via "alien calculus", which provides a full description of the Stokes phenomenon for linear or non-linear differential or difference equations. The first of a series of three, entitled *Divergent Series, Summability and Resurgence*, this volume is aimed at graduate students, mathematicians and theoretical physicists interested in geometric, algebraic or local analytic properties of

dynamical systems. It includes useful exercises with solutions. The prerequisites are a working knowledge of elementary complex analysis and differential algebra.

Divergent Series - Godfrey Harold Hardy 2000

From the Preface by J. E. Littlewood: "All [Hardy's] books gave him some degree of pleasure, but this one, his last, was his favourite. When embarking on it he told me that he believed in its value (as well he might), and also that he looked forward to the task with enthusiasm. He had actually given lectures on the subject at intervals ever since his return to Cambridge in 1931, and he had at one time or another lectured on everything in the book except Chapter XIII [The Euler-MacLaurin sum formula] ... [I]n the early years of the century the subject [Divergent Series], while in no way mystical or unrigorous, was regarded as sensational, and about the present title, now colourless, there hung an aroma of paradox and audacity."
