Toxic Geek Masculinity in Media - Anastasia Salter 2017-11-08

This book examines changing representations of masculinity in geek media, during a time of transition in which “geek” has not only gone mainstream but also become a more contested space than ever, with continual clashes such as Gamergate, the Rabid and Sad Puppies’ attacks on the Hugo Awards, and battles at conventions over “fake geek girls.” Anastasia Salter and Bridget Blodgett critique both gendered depictions of geeks, including shows like Chuck and The Big Bang Theory, and aspirational geek heroes, ranging from the Winchester brothers of Supernatural to BBC’s Sherlock and the varied superheroes of the Marvel Cinematic Universe. Through this analysis, the authors argue that

toxic masculinity is deeply embedded in geek culture, and that the identity of geek as victimized other must be redefined before geek culture and media can ever become an inclusive space.

Thermodynamic Properties of Nonelectrolyte Solutions - William Acree
2012-12-02

Thermodynamic Properties of Nonelectrolyte Solutions reviews several of the more classical theories on the thermodynamics of nonelectrolyte solutions. Basic thermodynamic principles are discussed, along with predictive methods and molecular thermodynamics. This book is comprised of 12 chapters; the first of which introduces the reader to mathematical relationships, such as concentration variables, homogeneous functions, Euler's theorem, exact differentials, and method of least squares. The discussion then turns to partial molar quantities, ideal and nonideal solutions, and empirical expressions for predicting the thermodynamic properties of multicomponent mixtures from binary data. The chapters that follow explore binary and ternary mixtures containing only nonspecific interactions; the thermodynamic excess properties of liquid mixtures and ternary alcohol-hydrocarbon systems; and solubility behavior of nonelectrolytes. This book concludes with a chapter describing the use of gas-liquid

chromatography in determining the activity coefficients of liquid mixtures and mixed virial coefficients of gaseous mixtures. This text is intended primarily for professional chemists and researchers, and is invaluable to students in chemistry or chemical engineering who have background in physical chemistry and classical thermodynamics.
