neurocognitive mechanisms and the cognitive processes underlying acquisition of arithmetic abilities and their significance for education have been the subject of intense research in the last few decades, but the most part of this research has been conducted in non-applied settings and there's still a deep discrepancy between the level of scientific knowledge and its implementation into actual educational settings. Now it's time to bring the results from the laboratory to the classroom. Apart from bringing the theoretical discussions to educational settings, the volume presents a wide range of methods for early detection of children with risks in mathematics learning and strategies to develop effective interventions based on innovative cognitive test instruments. It also provides insights to translate research knowledge into public policies in order to address socioeconomic issues. And it does so from an international perspective, dedicating a whole

section to the cultural diversity of mathematics learning difficulties in different parts of the world. All of this makes the International Handbook of Mathematical Learning Difficulties an essential tool for those involved in the daily struggle to prepare the future generations to succeed in the global knowledge society.

Mathematics and Multi-Ethnic Students - Yvelyne Germain-McCarthy 2017-05-25
Mathematics and Multi-Ethnic Students provides detailed profiles of teachers across the nation who have implemented effective mathematics instruction for diverse student populations. In this revised edition, Yvelyne Germain-McCarthy expands upon the popular case studies and adds two new chapters to highlight the latest educational research and practices that are reflected in the case studies. A third new chapter introduces the concept of the Life-Long Learning Laboratory where courageous questions on issues such as the impact of race on student learning are discussed. Featuring useful framing tools including the Discussion with Colleagues and Commentary sections, *Mathematics and Multi-Ethnic Students* translates concrete instances of access and equity into generalized problem-solving methods for promoting ethnic diversity across grade levels.

An important resource for pre-service and in-service educators, researchers, administrators, and policy makers, this volume highlights the work of teachers who have gone beyond mere awareness of reform recommendations in mathematics instruction. By uniting the goals of multicultural education with those of the mathematics curriculum, educators will learn to conceptualize and implement best practices for effective, equitable teaching and learning of mathematics for their students.

Last Bell - Carl Bistany
2015-11-05

In the mid-nineties, the Alfred Glickman School was just another failing school in one of America's most violent cities. Then SABIS, a private, for-profit education provider, took over. Twenty years later, the school is a six-time silver medalist in U.S. News & World Report's annual "America's Best High Schools" listing, and every single graduate of the school has been offered a college place. With success of this magnitude, you would think that for-profit managed charter schools like SABIS would be in high demand. On the contrary, they are fought at every turn. Why is the idea of employing for-profit companies

to help rescue failing public schools treated with fear and hostility? Stranger still, why does a nation built on free enterprise refuse to embrace a free market strategy when so many students and schools would clearly benefit and with so much at stake? Last Bell is a book about politics, money and power. It examines the charge that for-profits running charter schools are in it for the money, not the kids, and reveals the real motives of those spreading these ideas and why they fight private sector involvement in public schools. Last Bell is a reasonable voice in a polarized debate. It does not call for an end to public schools but rather imagines a future in which private companies help create a competitive market for public education to boost performance, turn derelict schools into centers of excellence and give parents even in the worst neighborhoods real choice and their children a future.
