[A House to Remember](#) - Edna Gammon 2011-10-10

What happened at 10 Rillington Place was so shocking and gruesome that even today everyone over a certain age still remembers the case with a shudder. In 1950, Timothy Evans was hanged for the violent murder of his baby daughter; he was also assumed to have murdered his wife. Then, less than three years later, another tenant, John Christie, was found to have killed at least six women, hiding their bodies in the garden, under floorboards and in a concealed kitchen alcove. Christie followed Evans to the gallows. It seemed unlikely that two murderers were living at 10 Rillington Place, and the evidence that emerged in the Christie case eventually led to Evans receiving a pardon. But there was also circumstantial evidence that Evans had indeed killed his wife and child. Crime student Edna Gammon firmly believes that Evans was guilty. In A House To Remember, she explains why.

[Wind and Earthquake Resistant Buildings](#) - Bungale S. Taranath 2004-12-15

Developed as a resource for practicing engineers, while simultaneously serving as a text in a formal classroom setting, Wind and Earthquake Resistant Buildings provides a fundamental understanding of the behavior of steel, concrete, and composite building structures. The text format follows, in a logical manner, the typical process of designing a building, from the first step of determining design loads, to the final step of evaluating its behavior for unusual effects. Includes a worksheet that takes the drudgery out of estimating wind response. The book presents an in-depth review of wind effects and outlines seismic design, highlighting the dynamic behavior of buildings. It covers the design and detailing the requirements of steel, concrete, and composite buildings assigned to seismic design categories A through E. The author explains critical code specific items and structural concepts by doing the nearly impossible feat of addressing the history, reason for existence, and intent of major design provisions of the building codes. While the scope of the book is intentionally broad, it provides enough in-depth coverage to make it useful for structural engineers in all stages of their careers.

Unsafe at Any Meal - Dr. Renee Joy Dufault 2017-05-04

\* A TOP "SUMMER READS" TITLE - Environmental Health News (EHN) Each year, Americans consume hundreds of food products that contain truly dangerous compounds, including heavy metals, pesticides, and other harmful additives—with the blessing of the FDA. Why is this happening and why haven't you heard about it? In *Unsafe at Any Meal*, Dr. Renee Dufault, former food investigator for the Food and Drug Administration, provides the startling answers. While at the FDA, Dr. Dufault discovered that mercury—a

highly toxic metal—was contaminating the plumbing systems of many food manufacturing plants. Upon further examination, she discovered that the same mercury was also evident in a number of processed foods commonly sold in supermarkets. When Dr. Dufault revealed these disturbing findings to her superiors, she was told to stop her investigation. Her continued efforts to raise the issue always met with a dead end, so she chose to take an early retirement from the FDA. Dr. Dufault then devoted her energy to making the public aware of the insidious dangers that contaminate our food. In 2010, she founded an organization of scientists to study the scope of this problem and has published numerous research articles on the topic with little fanfare. To expose what still seems to be a well-kept secret by the FDA, she has written *Unsafe at Any Meal* to provide consumers with the information they need to know. The book begins with the author's story leading up to the creation of this work. It then describes the various toxic substances that are most commonly found in our food supply, and explains how they affect your genes, health, and the surrounding environment. After examining the Standard American Diet, which is sorely lacking in disease-preventing nutrients, it discusses the country's trend toward consuming a skyrocketing amount of ingredients that can contain heavy metals. It further shows how exposure to these heavy metals can contribute to conditions such as ADHD or autism. Also included is a helpful guide to reading food labels, recognizing misleading marketing tactics, and knowing what to look for—and what to look out for—in the aisles of your grocery store. Over fifty years ago, Rachel Carson's book *Silent Spring* exposed the dangers of DDT in our food supply. Unfortunately, it seems that the problem of food contamination has actually become worse. Backed by research and first-hand experience, Dr. Dufault reveals how the FDA has failed us, and outlines how you can protect yourself and your family by knowing what to avoid and by filling your kitchen with food that is clear of toxins.

**The Book of L** - G. Rozenberg 2012-12-06

This book is dedicated to Aristid Lindenmayer on the occasion of his 60th birthday on November 17, 1985. Contributions range from mathematics and theoretical computer science to biology. Aristid Lindenmayer introduced language-theoretic models for developmental biology in 1968. Since then the models have been commonly referred to as L systems. Lindenmayer's invention turned out to be one of the most beautiful examples of interdisciplinary science: work in one area (developmental biology) induces most fruitful ideas in other areas (theory of formal languages and automata, and formal power series). As evident from the articles and references in this book, the interest in L systems is continuously growing. For newcomers the first contact with L systems usually happens via the most basic class of L systems, namely, DOL systems. Here "0" stands for zero context between developing cells. It has been a major typographical problem that printers are unable to distinguish between 0 (zero) and O (oh). Thus, DOL was almost always printed with "oh" rather than "zero", and also pronounced that way. However, this misunderstanding turned out to be very fortunate. The wrong spelling "DOL" of "DOL" could be read in the suggestive way: DO L Indeed, hundreds of researchers have followed this suggestion. Some of them appear as contributors to this book. Of the many who could not contribute, we in particular regret the absence of A. Ehrenfeucht, G. Herman and H.A. Maurer whose influence in the theory of L systems has been most significant.

*Geotechnical Engineering* - V.N.S. Murthy 2002-10-25

A must have reference for any engineer involved with foundations, piers, and retaining walls, this remarkably comprehensive volume illustrates soil characteristic concepts with examples that detail a wealth of practical considerations. It covers the latest developments in the design of drilled pier foundations and mechanically stabilized earth retaining wall and explores a pioneering approach for predicting the nonlinear behavior of laterally loaded long vertical and batter piles. As complete and authoritative as any volume on the subject, it discusses soil formation, index properties, and classification; soil permeability, seepage, and the effect of water on stress conditions; stresses due to surface loads; soil compressibility and consolidation; and shear strength characteristics of soils. While this book is a valuable teaching text for advanced students, it is one that the practicing engineer will continually be taking off the shelf long after school lets out. Just the quick reference it affords to a huge range of tests and the appendices filled with essential data, makes it an essential addition to an civil engineering library.

This book presents the papers from the Internal Combustion Engines: Performance, fuel economy and emissions held in London, UK. This popular international conference from the Institution of Mechanical Engineers provides a forum for IC engine experts looking closely at developments for personal transport applications, though many of the drivers of change apply to light and heavy duty, on and off highway, transport and other sectors. These are exciting times to be working in the IC engine field. With the move towards downsizing, advances in FIE and alternative fuels, new engine architectures and the introduction of Euro 6 in 2014, there are plenty of challenges. The aim remains to reduce both CO2 emissions and the dependence on oil-derivate fossil fuels whilst meeting the future, more stringent constraints on gaseous and particulate material emissions as set by EU, North American and Japanese regulations. How will technology developments enhance performance and shape the next generation of designs? The book introduces compression and internal combustion engines' applications, followed by chapters on the challenges faced by alternative fuels and fuel delivery. The remaining chapters explore current improvements in combustion, pollution prevention strategies and data comparisons. presents the latest requirements and challenges for personal transport applications gives an insight into the technical advances and research going on in the IC Engines field provides the latest developments in compression and spark ignition engines for light and heavy-duty applications, automotive and other markets

*Wine to Water* - Doc Hendley 2012-01-05

The captivating story of an ordinary bartender who's changing the world through clean water. Doc Hendley never set out to be a hero. In 2004, Hendley-a small- town bartender- launched a series of wine-tasting events to raise funds for clean-water projects and to bring awareness to the world's freshwater crisis. He planned to donate the proceeds through traditional channels, but instead found himself traveling to one of the world's most dangerous hot spots: Darfur, Sudan. There, Doc witnessed a government-sponsored genocide where the number-one weapon wasn't bullets-it was water. The Janjaweed terrorists had figured out that shooting up a bladder containing 10,000 liters of water, or dumping rotting corpses into a primary water source is remarkably efficient for the purposes of mass extermination. With limited funds, Doc realized that he couldn't build new wells costing \$10,000 a pop, but he could hire local workers to restore a damaged well for a mere \$50 each. He'd found his mission. Today, Doc and Wine to Water continue to help stricken peoples repair and maintain water- containment systems in places like Darfur, Cambodia, Uganda,

and Haiti. Doc is a regular, rough-and-tumble guy who loves booze, music, and his Harley- but he also wanted to help. Wine to Water is a gripping story about braving tribal warfare and natural disasters and encountering fascinating characters in far-flung regions of the world. It is also an authoritative account of a global crisis and an inspirational tale that proves how ordinary people can improve the world.
