The Rocket into Planetary Space - Hermann Oberth 2014-10-22

For all being interested in astronautics, this translation of Hermann Oberth's classic work is a truly historic event. Readers will be impressed with this extraordinary pioneer and his incredible achievement. In a relatively short work of 1923, Hermann Oberth laid down the mathematical laws governing rocketry and spaceflight, and he offered practical design considerations based on those laws.

Current Topics in Public Health - Alfonso J. Rodriguez-Morales 2013-05-15

Public Health is regarded as the basis and cornerstone of health, generally and in medicine. Defined as the science and art of preventing disease, prolonging life and promoting health through the organized efforts and informed choices of society, organizations, public and private, communities and individuals, this discipline has been renewed by the incorporation of multiple actors, professions, knowledge areas and it has also been impacted and promoted by multiple technologies, particularly - the information technology. As a changing field of knowledge, Public Health requires evidence-based information and regular updates. Current Topics in Public Health presents updated information on multiple topics related to actual areas of interest in this growing and exciting medical science, with the conception and philosophy that we are working to improve the health of the population, rather

than treating diseases of individual patients, taking decisions about collective health care that are based on the best available, current, valid and relevant evidence, and finally within the context of available resources. With participation of authors from multiple countries, many from developed and developing ones, this book offers a wide geographical perspective. Finally, all these characteristics make this book an excellent update on many subjects of world public health.

1Q84 - Haruki Murakami 2011-10-25

The long-awaited magnum opus from Haruki

Murakami, in which this revered and bestselling author gives us his hypnotically addictive, mind-bending ode to George Orwell's 1984. The year is 1984. Aomame is riding in a taxi on the expressway, in a hurry to carry out an assignment. Her work is not the kind that can be discussed in public. When they get tied up in traffic, the taxi driver suggests a bizarre 'proposal' to her. Having no other choice she agrees, but as a result of her actions she starts to feel as though she is gradually becoming detached from the real world. She has been on a top secret mission, and her next job leads her to encounter the superhuman founder of a religious cult. Meanwhile, Tengo is leading a nondescript life but wishes to become a writer. He inadvertently becomes involved in a strange disturbance that develops over a literary prize. While Aomame and Tengo impact on each other in various ways, at times by accident and at times intentionally, they come closer and closer to meeting. Eventually the two of them notice

that they are indispensable to each other. Is it possible for them to ever meet in the real world?

Learning and Understanding - National Research Council 2002-08-06

This book takes a fresh look at programs for advanced studies for high school students in the United States, with a particular focus on the Advanced Placement and the International

Baccalaureate programs, and asks how advanced studies can be significantly improved in general. It also examines two of the core issues surrounding these programs: they can have a profound impact on other components of the education system and participation in the programs has become key to admission at selective institutions of higher education. By looking at what could enhance the quality of high school advanced study programs as well as what precedes and comes after these programs, this report provides teachers, parents, curriculum developers, administrators, college science and mathematics faculty, and the educational research community with a detailed assessment that can be used to guide change within advanced study programs.

The Challenge of Debt Reduction during Fiscal Consolidation - Luc Eyraud 2013-03-08

Studies suggest that fiscal multipliers are currently high in many advanced economies. One important implication is that fiscal

tightening could raise the debt ratio in the short term, as fiscal gains are partly wiped out by the decline in output. Although this effect is not long-lasting and debt eventually declines, it could be an issue if financial markets focus on the short-term behavior of the debt ratio, or if country authorities engage in repeated rounds of tightening in an effort to get the debt ratio to converge to the official target. We discuss whether these problems could be addressed by setting and monitoring debt targets in cyclically-adjusted terms.

Calculus for Business, Economics, and the Social and Life Sciences - Laurence D.

Hoffmann 2007-06-01

Calculus for Business, Economics, and the Social and Life Sciences introduces calculus in real-world contexts and provides a sound, intuitive understanding of the basic concepts students need as they pursue careers in business, the life sciences, and the social sciences. The new Ninth Edition builds on the straightforward writing

style, practical applications from a variety of disciplines, clear step-by-step problem solving techniques, and comprehensive exercise sets that have been hallmarks of Hoffmann/Bradley's success through the years.

Singularities in Fluids, Plasmas and Optics - Russel Caflisch 2012-12-06

Singularities in Fluids, Plasmas and Optics, which contains the proceedings of a NATO Workshop held in Heraklion, Greece, in July 1992, provides a survey of the state of the art in the analysis and computation of singularities in physical problems drawn from fluid mechanics, plasma physics and nonlinear optics. The singularities include curvature singularities on fluid interfaces, the onset of turbulence in 3-D inviscid flows, focusing singularities for laser beams, and magnetic reconnection. The

highlights of the book include the nonlinear Schrödinger equation for describing laser beam focusing, the method of complex variables for the analysis and computation of singularities on fluid interfaces, and studies of singularities for the 3-D Euler equations. The book is suitable for graduate students and researchers in these areas.

Jersey Shore Impressionists - Roy Pedersen
2013

Water and light have seduced artists through the years and the quality of these elements at the New Jersey Shore continues to attract artists to this day. Between the late 1800s and 1940, an inspired group of painters were drawn to the New Jersey coastline, forming communities of artists. *Jersey Shore Impressionists* breaks new ground in the history of American art by recognizing the distinct influence of New Jersey and its Shore on impressionist era American painters. This book establishes - for the first time - a category of impressionist American

painters who focused on, or were profoundly influenced by, the landscapes and seascapes of this Shore — from Sandy Hook and Highlands to the Barnegat Bay region to Cape May. “Not since 1964, nearly 50 years ago, and only once before that in 1938 has there been published a book on painters in New Jersey,” says the book's author, Roy Pedersen. “Never until now has there appeared a survey of the regional impressionist painters of New Jersey. This book and the accompanying exhibition for the first time celebrate these unrecognized works into the history of New Jersey and American art.” *Jersey Shore Impressionists* is produced in conjunction with a 2013 exhibition at the Morven Museum & Garden in Princeton, NJ. The exhibition, titled “Coastal Impressions: Painters of the Jersey Shore, 1880-1940” seeks to examine how the New Jersey shore was home to artist colonies whose output rivaled that of the better-known colonies of Old Lyme and Cos Cob, Connecticut, and Bucks County, Pennsylvania. In a Foreword,

Richard J. Boyle, former director of the Pennsylvania Academy of the Fine Arts, describes the foundation of art colonies, and how they traveled from origins in mid-nineteenth century France to the plein-air attraction of the Jersey Shore's "special light." The first art colony - at Manasquan - forms around 1880 as young artists fresh from European training in Germany, France and Italy begin to arrive, and the book includes work from these artists - Will Hicok Low, Theodore Robinson, Albert Grantley Reinhart, Charles Freeman and Caroline Coventry Haynes. The next generation - Edward Boulton, Ida Wells Stroud, Julius Golz - trained in America, join and form new colonies to paint the unique light as well as the activities of the Shore. The passionate work created by these artists stands as an important, but unsung, chapter of American Impressionism and is celebrated in this book, establishing the important contribution to American art in general, and New Jersey's cultural heritage in

particular.

Visible Learning - John Hattie 2008-11-19

This unique and ground-breaking book is the result of 15 years research and synthesises over 800 meta-analyses on the influences on achievement in school-aged students. It builds a story about the power of teachers, feedback, and a model of learning and understanding. The research involves many millions of students and represents the largest ever evidence based research into what actually works in schools to improve learning. Areas covered include the influence of the student, home, school, curricula, teacher, and teaching strategies. A model of teaching and learning is developed based on the notion of visible teaching and visible learning. A major message is that what works best for students is similar to what works best for teachers - an attention to setting challenging learning intentions, being clear about what success means, and an attention to learning strategies for developing conceptual

understanding about what teachers and students know and understand. Although the current evidence based fad has turned into a debate about test scores, this book is about using evidence to build and defend a model of teaching and learning. A major contribution is a fascinating benchmark/dashboard for comparing many innovations in teaching and schools.

Activist Science and Technology Education -

Larry Bencze 2014-06-05

This collection examines issues of agency, power, politics and identity as they relate to science and technology and education, within contemporary settings. Social, economic and ecological critique and reform are examined by numerous contributing authors, from a range of international contexts. These chapters examine pressing pedagogical questions within socio-scientific contexts, including petroleum economies, food justice, health, environmentalism, climate change, social media and biotechnologies. Readers will discover far

reaching inquiries into activism as an open question for science and technology education, citizenship and democracy. The authors call on the work of prominent scholars throughout the ages, including Bourdieu, Foucault, Giroux, Jasanoff, Kierkegaard, Marx, Nietzsche, Rancière and Žižek. The application of critical theoretical scholarship to mainstream practices in science and technology education distinguishes this book, and this deep, theoretical treatment is complemented by many grounded, more pragmatic exemplars of activist pedagogies. Practical examples are set within the public sphere, within selected new social movements, and also within more formal institutional settings, including elementary and secondary schools, and higher education. These assembled discussions provide a basis for a more radically reflexive reworking of science and technology education. Educational policy makers, science education scholars, and science and technology educators, amongst others, will

find this work thought-provoking, instructive and informative.

Design, Make, Play - Margaret Honey

2013-03-12

Design, Make, Play: Growing the Next

Generation of STEM Innovators is a resource for practitioners, policymakers, researchers and program developers that illuminates creative, cutting edge ways to inspire and motivate young people about science and technology learning. The book is aligned with the National Research Council's new Framework for Science Education, which includes an explicit focus on engineering and design content, as well as integration across disciplines. Extensive case studies explore real world examples of innovative programs that take place in a variety of settings, including schools, museums, community centers, and virtual spaces. *Design, Make, and Play* are presented as learning methodologies that have the power to rekindle children's intrinsic motivation and innate curiosity about STEM (science, technology, engineering, and mathematics) fields. A digital companion app showcases rich multimedia that brings the stories and successes of each program—and the students who learn there—to

life.

Bitcoin - Jerry Brito 2013-12-19

As the world's first decentralized digital currency, Bitcoin has the potential to revolutionize online payments systems in a way that benefits consumers and businesses. Instead of using an intermediary such as PayPal or submitting credit card information to a third party for verification—both of which often include transaction fees and other restrictions—Bitcoin allows individuals to pay each other directly for goods or services. The characteristics that make Bitcoin so innovative have also made it a target for regulators, who fear that the cryptocurrency will aid tax evasion, money laundering, and other crimes. While it is true that it can be used for nefarious purposes, the same can be said of cash. But, unlike cash, Bitcoin transactions are recorded in an online ledger. In this new primer published by the

Mercatus Center at George Mason University, Jerry Brito and Andrea Castillo describe how the digital currency works and address many of the common misconceptions about it. They also analyze current laws and regulations that may already cover digital currencies and warn against preemptively placing regulatory restrictions on Bitcoin that could stifle the new technology before it has a chance to evolve. In addition, they give several recommendations about how to treat Bitcoin going forward. Here, at the forefront of the debate, Brito and Castillo both support innovation and provide much-needed clarity for policymakers and law enforcement. A Spanish edition of this book is also available from the Mercatus Center.

The Saffron Kitchen - Yasmin Crowther
2007-08-28

In a powerful debut novel that moves between the crowded streets of London and the desolate mountains of Iran, Yasmin Crowther paints a stirring portrait of a family shaken by events

from decades ago and worlds away. On a rainy day in London the dark secrets and troubled past of Maryam Mazar surface violently, with tragic consequences for her daughter, Sara, and her newly orphaned nephew. Maryam leaves her English husband and family and returns to the remote Iranian village where her story began. In a quest to piece their life back together, Sara follows her mother and finally learns the terrible price Maryam once had to pay for her freedom, and of the love she left behind. Set against the breathtaking beauty of two very different places, this stunning family drama transcends culture and is, at its core, a rich and haunting narrative about mothers and daughters.

Pathologic Myopia - Richard F. Spaide
2013-12-04

Pathological Myopia is a major cause of severe vision loss worldwide. The mechanisms for vision loss include cataract, glaucoma, retinal detachment, and above all, degeneration of the macula within the posterior staphyloma.

Pathological Myopia is one of the only current books to specifically address this disease and discusses recent developments in imaging technologies and various approaches to treatments, such as laser photocoagulation, photodynamic therapy, pharmaco-therapeutic injections in the vitreous, and surgery. Complete with high-quality color images, this book is written and edited by leaders in the field and is geared towards ophthalmologists, including residents and fellows in training, glaucoma and cataract specialists, and vitreoretinal macula experts.

Crowdsourcing - Daren C. Brabham 2013-05-10
A concise introduction to crowdsourcing that goes beyond social media buzzwords to explain what crowdsourcing really is and how it works. Ever since the term “crowdsourcing” was coined in 2006 by Wired writer Jeff Howe, group activities ranging from the creation of the Oxford English Dictionary to the choosing of new colors for M&Ms have been labeled with this

most buzz-generating of media buzzwords. In this accessible but authoritative account, grounded in the empirical literature, Daren Brabham explains what crowdsourcing is, what it is not, and how it works. Crowdsourcing, Brabham tells us, is an online, distributed problem solving and production model that leverages the collective intelligence of online communities for specific purposes set forth by a crowdsourcing organization—corporate, government, or volunteer. Uniquely, it combines a bottom-up, open, creative process with top-down organizational goals. Crowdsourcing is not open source production, which lacks the top-down component; it is not a market research survey that offers participants a short list of choices; and it is qualitatively different from predigital open innovation and collaborative production processes, which lacked the speed, reach, rich capability, and lowered barriers to entry enabled by the Internet. Brabham describes the intellectual roots of the idea of

crowdsourcing in such concepts as collective intelligence, the wisdom of crowds, and distributed computing. He surveys the major issues in crowdsourcing, including crowd motivation, the misconception of the amateur participant, crowdfunding, and the danger of “crowdsploitation” of volunteer labor, citing real-world examples from Threadless, InnoCentive, and other organizations. And he considers the future of crowdsourcing in both theory and practice, describing its possible roles in journalism, governance, national security, and science and health.

Police Ethics - Seumas Miller 2006

On Apology - Aaron Lazare 2005-09-24

One of the most profound interactions that can

occur between people, apologies have the power to heal humiliations, free the mind from deep-seated guilt, remove the desire for vengeance, and ultimately restore broken relationships. With *On Apology*, Aaron Lazare offers an eye-opening analysis of this vital interaction, illuminating an often hidden corner of the human heart. He discusses the importance of shame, guilt, and humiliation, the initial reluctance to apologize, the simplicity of the act of apologizing, the spontaneous generosity and forgiveness on the part of the offended, the transfer of power and respect between two parties, and much more. Readers will not only find a wealth of insight that they can apply to their own lives, but also a deeper understanding of national and international conflicts and how we might resolve them. The act of apologizing is quite simply immensely fulfilling. *On Apology* opens a window onto this common occurrence to reveal the feelings and actions at the heart of this profound interaction.

Total Factor Productivity Growth in Historical Perspective - Robert Shackleton 2013-04-20

Over the past century or more, gains in total factor productivity (TFP) have accounted for well over half the growth in measured U.S. labor productivity (output per hour of work) -- that is, they have contributed more to the measured growth of labor productivity than has growth in the amount of capital per worker -- and they are likely to be critical for future economic growth as well. This study reviews the broad contours of TFP growth in the U.S. economy since 1870, highlighting the contribution of various technological innovations to the growth of different sectors of the economy. It also notes the correlation between TFP growth and improvements in general health and well-being as reflected in changes in life expectancy. Finally, the study discusses the potential for continued growth in TFP in the future. Tables and figures. This is a print on demand report.

Thomas' Calculus - Weir 2008

Purple Comet! Math Meet - Titu Andreescu
2013-04-30

This book is a comprehensive compilation of all the problems and solutions from the 2003 to 2012 Purple Comet Math Meet contests for middle and high school students. The problems featured not only employ an extensive range of mathematical concepts from algebra, geometry, number theory, and combinatorics but also encourage team collaboration. Any student interested in mathematics--whether looking to prepare for contests or, even more importantly, to sharpen math problem-solving skills--would cherish and enjoy this unique and pertinent collection of meaningful problems and solutions.

Democratic Science Teaching: Building the Expertise to Empower Low-Income Minority Youth in Science - Sreyashi Jhumki Basu
2011-11-12

Democratic science pedagogy has the potential to shape learning outcomes and science engagement by taking on directly issues of

pedagogy, learning, and social justice. In this text we provide a framework for democratic science teaching in order to interrogate the purposes and goals of science education in classrooms globally, as well as to call attention to ways of being in the classroom that position teachers and students as important and powerful participants in their own learning and as change-agents of a larger global society. We develop three core conceptual tools for democratic science teaching, that together frame ways of thinking and being in classrooms that work towards a more just world: Voice, Authority, and Critical Science Literacy. Each conceptual tool is developed in the introductory chapters then taken up in different pedagogical and analytic ways in the chapters that span the text. The chapters present researcher, teacher, and student centered lenses for investigating democratic science education and reflect elementary through high school education, both in school and out of school, in the US and

globally.

Banking reform - Great Britain: H.M. Treasury
2013-07-17

The Financial Services (Banking Reform) Bill aims to establish a more resilient, stable and competitive banking sector; to reduce the severity of a future financial crisis; and to protect taxpayers in the event of such a crisis. It is primarily an enabling Bill, which provides HM Treasury with the requisite powers to implement the policy underlying the Bill through secondary legislation. Three illustrative draft instruments were published in March 2013 in order to aid Parliamentary scrutiny of the Bill, and the Government has continued to develop those instruments. This paper invites comments on a further four statutory instruments: Ring-fenced Bodies and Core Activities Order; Excluded Activities and Prohibitions Order; Banking reform (Loss Absorbency Requirement) Order; and the Fees and Prescribed International Organisations Regulations. Further secondary

legislation is planned for pensions and building societies.

The Oxford Latin Syntax - Harm Pinkster 2015

The goal of this work is to present an up-to-date successor to Keuhner-Stegmann's *Ausführliche Grammatik der lateinischen Sprache*, taking into account new editions of Latin texts with better knowledge of the manuscripts, the publication and study of texts unknown in Keuhner-Stegmann's time, recent linguistic studies, and new methods and models in linguistics.
