Nevertheless, it is not unusual for companies to have very high values in receivables. Especially for companies with a turnover of more than 100 million EUR, the receivables grow to a value of 10 million EUR or more. This capital is usually unavailable for the company and may become available using Asset Securitisation to refinance the receivables. Nowadays, Securitization is exercised in many

branches, but the focus of this paper should be on ABS-projects with banks. The influence of Basel II on the behaviour of credit institutions further reinforces the importance of Asset Securitisation as a tool for companies to improve capital costs and the balance sheet ratios. This again has implications for the rating of enterprises. Due to the growing interest in Asset Securitisation, a lot of research has been done by the European financial institutions. ABS might be designed in many different variants. To consider all of them, a realistic volume of this work would be exceeded. Target of this paper is to give an overview about the function of ABS and the affiliated possibilities and chances to use them in practice. In the first part of this paper, the question of definition and of the basic structure of Asset Backed Securities will be examined. Furthermore, the requirements for an Asset Securitisation in respect to the portfolio of as-sets will be explained. The second part is concerned with a detailed outline of the two groups of ABS, namely True Sale and Synthetic Sale and the allied key role of the KfW. Thereby, the questions of adding value and benefits for the differ-ent participants within structured finance transactions are examined. In the third part, general facts and figures as well as the advantages and disadvantages from the bank's perspective are regarded. Drawing on survey data collected in collaboration with Gallup, Inc., the Global Findex database covers more than 140 economies around the world. The initial survey round was followed by a second one in 2014 and by a third in 2017. Compiled using nationally representative surveys of more than 150,000 adults age 15 and above in over 140 economies, *The Global Findex Database 2017: Measuring Financial Inclusion and the Fintech Revolution* includes updated indicators on access to and use of formal and informal financial services. It has additional data on the use of financial technology (or fintech), including the use of mobile phones and the Internet to conduct financial transactions. The data reveal opportunities to expand access to financial services among people who do not have an account—the unbanked—as

**Drawdown** - Paul Hawken 2017-04-18

• New York Times bestseller • The 100 most substantive solutions to reverse global warming, based on meticulous research by leading scientists and policymakers around the world “At this point in time, the Drawdown book is exactly what is needed; a credible, conservative solution-by-solution narrative that we can do it. Reading it is an effective inoculation against the widespread perception of doom that humanity cannot and will not solve the climate crisis. Reported by-effects include increased determination and a sense of grounded hope.” —Per Espen Stoknes, Author, *What We Think About When We Try Not To Think About Global Warming* “There’s been no real way for ordinary people to get an understanding of what they can do and what impact it can have. There remains no single, comprehensive, reliable compendium of carbon-reduction solutions across sectors. At least until now. . . . The public is

hungry for this kind of practical wisdom.” —David Roberts, Vox “This is the ideal environmental sciences textbook—only it is too interesting and inspiring to be called a textbook.” —Peter Kareiva, Director of the Institute of the Environment and Sustainability, UCLA In the face of widespread fear and apathy, an international coalition of researchers, professionals, and scientists have come together to offer a set of realistic and bold solutions to climate change. One hundred techniques and practices are described here—some are well known; some you may have never heard of. They range from clean energy to educating girls in lower-income countries to land use practices that pull carbon out of the air. The solutions exist, are economically viable, and communities throughout the world are currently enacting them with skill and determination. If deployed collectively on a global scale over the next thirty years, they represent a credible path forward, not just to slow the earth’s warming but to reach drawdown, that point in time when greenhouse gases in the atmosphere peak and begin to decline. These measures promise cascading benefits to human health, security, prosperity, and well-being—giving us every reason to see this planetary crisis as an opportunity to create a just and livable world.
