Environmental Engineering Dictionary and Directory - Thomas M. Pankratz 2000-09-22

Like most technical disciplines, environmental science and engineering is becoming increasingly specialized. As industry professionals focus on specific environmental subjects they become less familiar with environmental problems and solutions outside their area of expertise. This situation is compounded by the fact that many environmental science related terms are confusing. Prefixes such as bio-, enviro-, hydra-, and hydro- are used so frequently that it is often hard to tell the words apart. The Environmental Engineering Dictionary and Directory gives you a complete list of brand terms, brand names, and trademarks - right at your fingertips.

End-to-End High Availability Solution for System z from a Linux Perspective - Lydia Parziale 2014-10-30

As Linux on System z becomes more prevalent and mainstream in the industry, the need for it to deliver higher levels of availability is increasing. This IBM Redbooks publication starts with an explanation of high availability (HA) fundamentals such as HA concepts and terminology. It continues with a discussion of why a business needs to consider an HA solution and then explains how to determine your business single points of failure. We outline the components of a high availability solution and describe these components. Then we provide some architectural scenarios and demonstrate how to plan and decide an implementation of an end-to-end HA solution, from Linux on System z database scenarios to z/OS, and include storage, network, z/VM, Linux, and middleware. This implementation includes the IBM Tivoli System Automation for Multiplatforms (TSA MP), which monitors and automates applications distributed across Linux, AIX®, and z/OS® operating systems, as well as a GDPS based solution. It includes the planning for an end-to-end scenario, considering Linux on System z, z/VM, and z/OS operating environments, and the middleware used. The TSA MP implements HA for infrastructure, network, operating systems, and applications across multiple platforms and is compared to a Linux HA implementation based on open source Linux-HA, which is Linux only.

Computer Architecture - John L. Hennessy 2012

The computing world today is in the middle of a revolution: mobile clients and cloud computing have emerged as the dominant paradigms driving programming and hardware innovation today. The Fifth Edition of Computer Architecture focuses on this dramatic shift, exploring the ways in which software and technology in the cloud are accessed by cell phones, tablets, laptops, and other mobile computing devices. Each chapter includes two real-world examples, one mobile and one datacenter, to illustrate this revolutionary change. Updated to cover the mobile computing revolution Emphasizes the two most important topics in architecture today: memory hierarchy and parallelism in all its forms. Develops common themes throughout each chapter: power, performance, cost, dependability, protection, programming models, and emerging trends ("What's Next") Includes three review appendices in the printed text. Additional reference appendices are available online. Includes updated Case Studies and completely new exercises.

The Printed Circuit Designer's Guide To... Thermal Management - American Standard Circuits 2020-10-06

Thermal management is one of the fastest-growing areas of the PCB segment, far outpacing the projected growth for the overall industry. While demand was originally driven by high-power telecommunication and mil-aero applications, it has rapidly expanded to include automotive, consumer electronics, and medical sectors. Written by Anaya Vardya, this book serves as a desk reference for designers on the most current thermal management techniques and methods from a PCB fabrication perspective, including a case study on an extreme mixed-technology design. Vardya also shares considerations designers should discuss with their PCB fabricators to ensure manufacturability, cost-effective solutions, and successful product launches. PCB designers and design engineers, both new and veteran, will learn how to "beat the heat" by gaining a thorough understanding of thermal management design processes.

Embedded System Design - Peter Marwedel 2010-11-16

Until the late 1980s, information processing was associated with large mainframe computers and huge tape drives. During the 1990s, this trend shifted toward information processing with personal computers, or PCs. The trend toward miniaturization continues and in the future the majority of information processing systems will be small mobile computers, many of which will be embedded into larger products and interfaced to the physical environment. Hence, these kinds of systems are called embedded systems. Embedded systems together with their physical environment are called cyber-physical systems. Examples include systems such as transportation and fabrication equipment. It is expected that the total market volume of embedded systems will be significantly larger than that of traditional information processing systems such as PCs and mainframes. Embedded systems share a number of common characteristics. For example, they must be dependable, efficient, meet real-time constraints and require customized user interfaces (instead of generic keyboard and mouse interfaces). Therefore, it makes sense to consider common principles of embedded system design. Embedded System Design starts with an introduction into the area and a survey of specification models and languages for embedded and cyber-physical systems. It provides a brief overview of hardware devices used for such systems and presents the essentials of system software for embedded systems, like real-time operating systems. The book also discusses evaluation and validation techniques for embedded systems. Furthermore, the book presents an overview of techniques for mapping applications to execution platforms. Due to the importance of resource efficiency, the book also contains a selected set of optimization techniques for embedded systems, including special compilation techniques. The book closes with a brief survey on testing. Embedded System Design can be used as a text book for courses on embedded systems and as a source which provides pointers to relevant material in the area for PhD students and teachers. It assumes a basic knowledge of information processing hardware and software. Courseware related to this book is available at <http://ls12-www.cs.tu-dortmund.de/~marwedel>.

Achieving High Availability on Linux for System z with Linux-HA Release 2 - Lydia Parziale 2009-04-13

As Linux® on System z® becomes more prevalent and mainstream in the industry, the need for it to deliver higher levels of availability is increasing. IBM® supports the High Availability Linux (Linux-HA) project, which provides high availability functions to the open source community. One component of the Linux-HA project is the Heartbeat program, which runs on every known Linux platform. Heartbeat is part of the framework of the Linux-HA project. This IBM Redbooks® publication provides information to help you evaluate and implement Linux-HA release 2 by using Heartbeat 2.0 on the IBM System z platform with either SUSE® Linux Enterprise Server version 10 or Red Hat® Enterprise Linux® 5. To begin, we review the fundamentals of high availability concepts and terminology. Then we discuss the Heartbeat 2.0 architecture and its components. We examine some of the special considerations when using Heartbeat 2.0 on Linux on System z, particularly Linux on z/VM®, with logical partitions (LPARs), interguest communication by using HiperSockets™, and Shoot The Other Node In The Head (STONITH) by using VSMERVE for Simple Network IPL (snIPL). By reading this book, you can examine our environment as we outline our installation and setup processes and configuration. We demonstrate an active and passive single resource scenario and a quorum scenario by using a single resource with three guests in the cluster. Finally, we demonstrate and describe sample usage scenarios.

Handbook of Adhesive Technology, Revised and Expanded - Antonio Pizzi 2003-08-06

The Handbook of Adhesive Technology, Second Edition exceeds the ambition of its bestselling forerunner by reexamining the mechanisms driving adhesion, categories of adhesives, techniques for bond formation and evaluation, and major industrial applications. Integrating modern technological innovations into adhesive preparation and application, this greatly expanded and updated edition comprises a total of 26 different adhesive groupings, including three new classes. The second edition features ten new chapters, a 40-page list of resources on adhesives, and abundant figures, tables, equations.

The Food Safety Information Handbook - Cynthia A. Roberts 2001

Outbreaks of E. Coli and Salmonella from eating tainted meat or chicken and Mad Cow Disease have consumers and the media focused on food safety-related topics. This handbook aimed at students as well as consumers is an excellent starting point for locating both print and electronic resources with timely

information about food safety issues, organizations and associations, and careers in the field.

My Life with the Printed Circuit - Paul Eisler 1989

The autobiography of Paul Eisler, recounting his invention and pioneering of the printed circuit in the midst of the blitz on London during World War II. It ranges from a fascinating behind-the-scenes report of how the invention was used during the war to an examination of the patent system itself and the evolutionary process from idea to product.

Janeway's Immunobiology - Kenneth M. Murphy 2008**Lead-Free Soldering** - Jasbir Bath 2007-06-26

The worldwide trend toward lead-free components and soldering is especially urgent in the European Union with the implementation strict new standards in July 2006, and with pending implementation of laws in China and California. This book provides a standard reference guide for engineers who must meet the new regulations, including a broad collection of techniques for lead-free soldering design and manufacture, which up to now have been scattered in difficult-to-find scholarly sources.

This collection of essays has two purposes: first to give the advanced student of Amharic a sample of the Amharic writing style and secondly to provide information on Ethiopia's cultural background. The texts were written by several Ethiopian university students some 40 years ago on subjects with which they were most familiar such as naming, christening, wedding, burial ceremony, food and drink, the manner of wearing clothes, house construction in Amhara country, daily work of an Ethiopian woman, landholding disputes, beauty, merchant, mercato, country market, artisans, elderhood, priests, dabtara, monkhood, divination, Christmas, Easter, Addis Ababa, the City of Gondar, Harar City etc. Although some time has passed since the collection was compiled the texts convey a good picture of Ethiopian culture. Each Amharic text is given an English translation on the opposite side. The book is completed by an Amharic-English Dictionary of nearly 90 pages and an index of English words and Amharic lexemes.

Mastering Fashion Styling - Jo Dingemans 1999

Fashion is a very popular subject among young people. Any course with fashion as a prefix attracts lots of students. Despite this, many prospective students and people have little idea what jobs in the fashion industry entail. Fashion Styling is one of the least well researched areas in fashion colleges. The emphasis is put on the end result, i.e. visual imagery, rather than the process of creating it. This 'how to' book provides an insight into the processes you have to follow to work in this area, be it editorial, commercial or show styling. It includes an eight-week introductory programme to the subject and projects whereby students can simulate professional practice and learn the techniques and skills necessary for a career in styling. At the end of the book there is a source directory, a glossary of terms, and a bibliography which provide reference points for further research and study.

Organic and Pervasive Computing -- ARCS 2004 - Christian Müller-Schloer 2004-03-18

This book constitutes the refereed proceedings of the International Conference on Architecture of

Computing Systems, ARCS 2004, held in Augsburg, Germany, in March 2004. The 22 revised full papers presented together with the abstracts of two invited lectures were carefully reviewed and selected from 50 submissions. The papers are organized in topical sections on organic computing, peer-to-peer computing, reconfigurable hardware, hardware, wireless architectures and networking, and applications.

Soldier Mobility - North Atlantic Treaty Organization. Research and Technology Organization. Human Factors and Medicine Panel. Specialists' Meeting 2001

Many NATO nations have soldier modernization programmes that aim to equip soldiers with fully-integrated state-of-the-art technologies that will enhance the five NATO soldier capability areas: lethality, protection, mobility, sustainability, and command and control. Military load carriage systems (LCS), which include clothing and personal areas. In particular, LCS are critical to soldier mobility and sustainability, and ultimately, to soldier performance and survival on the battlefield.
