**Embryology of Angiosperms** - B. M. Johri 2012-12-06

Thirty-four years have elapsed since the publication of the late Professor P. Maheshwari's text, An Introduction to the Embryology of Angiosperms, a work which for many years served as an invaluable guide for students and a rich source book for research workers. Various texts dealing with sections of the broad spectrum of topics encompassed by Maheshwari in his book have appeared in the interim, but a compendious modern work dealing with the whole field has been lacking. This present volume splendidly meets the need, and it is altogether fitting that Professor B. M. Johri, long an associate and close colleague of Professor Maheshwari and himself a prolific contributor to the subject, should have undertaken the task of editing it. When Maheshwari wrote, it was still feasible for one author to handle the subject, but today even someone with his fine breadth of vision and depth of understanding could not, alone, do it justice. So the effort has to be a collaborative one; and Professor Johri's achievement has been to bring together a team of authoritative collaborators, assign them their responsibilities, and put them to work to produce a text as integrated in its treatment as the diversity of the subject would allow. The product vividly illustrates the advances that have been made in the study of angiosperm reproductive systems in the last 30 years, and the book is surely destined to become the new standard for student and researcher alike.

**World Development Report 2018** - World Bank Group 2017-10-16

Every year, the World Bank's World Development Report (WDR) features a topic of central importance to global development. The 2018 WDR—LEARNING to Realize Education's Promise—is the first ever devoted entirely to education. And the time is right: education has long been critical to human welfare, but it is even more so in a time of rapid economic and social change. The best way to equip children and youth for the future is to make their learning the center of all efforts to promote education. The 2018 WDR explores four main themes: First, education's promise: education is a powerful instrument for eradicating poverty and promoting shared prosperity, but fulfilling its potential requires better policies—both within and outside the education system. Second, the need to shine a light on learning: despite gains in access to education, recent learning assessments reveal that many young people around the world, especially those who are poor or marginalized, are leaving school unequipped with even the foundational skills they need for life. At the same time, internationally comparable learning assessments show that skills in many middle-income countries lag far behind what those countries aspire to. And too often these shortcomings are hidden—so as a first step to tackling this learning crisis, it is essential to shine a light on it by assessing student learning better. Third, how to make schools work for all learners: research on areas such as brain science, pedagogical innovations, and school management has identified interventions that promote learning by ensuring that learners are prepared, teachers are both skilled and motivated, and other inputs support the teacher-learner relationship. Fourth, how to make systems work for learning: achieving learning throughout an education system requires more than just scaling up effective interventions. Countries must also overcome technical and political barriers by deploying salient metrics for mobilizing actors and tracking progress, building coalitions for learning, and taking an adaptive approach to reform.

Genetics and Biotechnology - Ulrich Kück 2013-03-09

Mycology, the study of fungi, originated as a subdiscipline of botany and was a descriptive discipline, largely neglected as an experimental science until the early years of this century. A seminal paper by Blakeslee in 1904 provided evidence for self incompatibility, termed "heterothallism", and stimulated interest in studies related to the control of sexual reproduction in fungi by mating-type specificities. Soon to follow was the demonstration that sexually reproducing fungi exhibit Mendelian inheritance and that it was possible to conduct formal genetic analysis with fungi. The names Burgeff, Kniep and Lindegren are all associated with this early period of fungal genetics research. These studies and the discovery of penicillin by Fleming, who shared a Nobel Prize in 1945, provided further impetus for experimental research with fungi. Thus began a period of interest in mutation induction and analysis of mutants for bio chemical traits. Such fundamental research, conducted largely with *Neurospora crassa*, led to the one gene: one enzyme hypothesis and to a second Nobel Prize for fungal research awarded to Beadle and Tatum in 1958.

Fundamental research in biochemical genetics was extended to other fungi, especially to *Saccharomyces cerevisiae*, and by the mid-1960s fungal systems were much favored for studies in eukaryotic molecular biology and were soon able to compete with bacterial systems in the molecular arena.

A Higher Sanskrit Grammar, for the Use of Schools and Colleges - Moreshvar Ramchandra Kāle 1969

The present grammar has been prepared with a view to meet the growing educational need of university students. The author has done his best to bring the present grammar up to the requirements of the students. In writing the various chapters of this book, the author has closely followed Pannini, as explained by Bhattoji Diksita. Many of the rules given here are translations of the relevant Sutras of Panini. The original Sutras are given in footnotes, where necessary. Sandhis and declensions are fully treated; compounds which dominate classical Sanskrit literature have received special attention; formation of feminine bases has been illustrated; Taddhita affixes have been arranged in an alphabetical order. A special feature of the present grammar is the chapter on the Conjugation of Verbs. The general rules given are amply illustrated by examples. All the verbs which change their pada when preceded by particular prepositions are given in an alphabetical order. The chapter on Syntax contains almost everything given in the first 20 chapters of author's Guide to Sanskrit Composition; the chapter on Prosody is based on the Chandomanjari and the Vrttaratnakara. The author has spared no pains to make the book as useful and as complete as possible.

**Fundamentals of Agronomy** - Venera S. Kamburova 2018-06

Agronomy deals with the science and technology of producing and using plants for food, fuel, fiber, and land reclamation. The importance of agronomy provides farmers with agricultural information about how to grow and care for plants and soils in certain environments. Factors such as climate, roots, moisture, weeds, pests, fungi, and erosion can pose significant challenges when farmers attempt to produce a plentiful harvest. In order to discover ways of integrating crops into the environment in ways that will allow them to prosper, agronomists study these agricultural hurdles. Throughout history, scientific and technological advances have greatly impacted the agriculture industry. Early farmers improved their crop production by inventing the first hoes. Today, farmers improve crop production through the use of global positioning systems (GPS). How did these changes happen? How did people learn about new ideas? How have these ideas changed farming methods? In recent times, research and development in this area have made innovations in farming products and practices. Fundamentals Of Agronomy presents the comprehensive coverage in the pursuit of improving the yield of crops, protecting crops against diseases and pest, making livestock healthy all the time, designing the best method of crops storage and even helping in predicting the climate conducive for agricultural practice cannot be over emphasized. Crop protection is very vital in agriculture. Disease affects plants and leads to delay in metabolic activities, stunted growth, shedding of flowers and fruits and sometimes the actual death of the plant. Cultural and chemical controls are most of the time used. Culturally, crop rotation is adopted, burning remains after harvesting, regular weeding of the soil, proper spacing of crops using of high yielding and resistant varieties and practicing of irrigation during dry season are adopted. This book will be of interest to students, professional practitioners, educators, and advisers who work directly with farmers, companies, and others in the agriculture community to implement the latest methods and tools for growing crops profitably and sustainably.

**Sisters & Brothers of America** - Swami Vivekananda 2015-09-08

The Parliament of the World's Religions opened on 11 September 1893 at the Art Institute of Chicago as part of the World's Columbian Exposition. On this day, Vivekananda gave a brief speech representing India and Hinduism. He was initially nervous, bowed to Saraswati (the Hindu goddess of learning) and began his speech with "Sisters and brothers of America!". At these words, Vivekananda received a two-minute standing ovation from the crowd of seven thousand. According to Sailendra Nath Dhar, when silence was restored he began his address, greeting the youngest of the nations on behalf of "the most ancient order of monks in the world, the Vedic order of sannyasins, a religion which has taught the world both tolerance, of and universal acceptance". Vivekananda quoted two illustrative passages from the "Shiva mahimna stotram": "As the different streams having their sources in different places all mingle their water in the sea, so, O Lord, the different paths which men take, through different tendencies, various though they appear, crooked or straight, all lead to Thee!" and "Whosoever comes to Me, through whatsoever form, I reach him; all men are struggling through paths that in the end lead to Me." According to Sailendra Nath Dhar, "It was only a short speech, but it voiced the spirit of the Parliament." Parliament President John Henry Barrows said, "India, the Mother of religions was represented by Swami Vivekananda, the Orange-monk who exercised the most wonderful influence over his auditors". Vivekananda attracted widespread attention in the press, which called him the "cyclonic monk from India". The New York Critique wrote, "He is an orator by divine right, and his strong, intelligent face in its picturesque setting of yellow and orange was hardly less interesting than those earnest words, and the rich, rhythmical utterance he gave them". The New York Herald noted, "Vivekananda is undoubtedly the greatest figure in the Parliament of Religions. After hearing him we feel how foolish it is to send missionaries to this learned nation". American newspapers reported Vivekananda as "the greatest figure in the parliament of religions" and "the most popular and influential man in the parliament". The Boston Evening Transcript reported that Vivekananda was "a great favourite at the parliament... if he merely crosses the platform, he is applauded". He spoke several more times "at receptions, the scientific section, and private homes" on topics related to Hinduism, Buddhism and harmony among religions until the parliament ended on 27 September 1893. Vivekananda's speeches at the Parliament had the common theme of universality, emphasising religious tolerance. He soon became known as a "handsome oriental" and made a huge impression as an orator.
