[Towards a New Museum](#) - Victoria Newhouse 1998

The last thirty years of the twentieth century saw the birth of more than six hundred art museums in the United States alone, with equal proliferation in much of Europe. Such projects as Frank Gehry's Guggenheim in Bilbao and Richard Meier's Getty Center in Los Angeles have dominated television newscasts and newspaper headlines worldwide. The success or failure of these new museums, in aesthetic, educational and financial terms, results from a variety of factors, none more important than their architecture. In this unique investigation, architectural historian Victoria Newhouse challenges many hitherto accepted premises of museum design. She demonstrates that new museums are often based on old concepts that no longer apply. This unvarnished analysis is informed by interviews with museum directors and curators, collectors, artists and the architects themselves. Newhouse divides her discussion according to the dominant characteristics of the museums: private collections, single-artist museums, sacred spaces, artists' self-created sites, and museum additions. In addition to the Getty and the Guggenheim Bilbao, the author discusses the Menil Collection in Houston, Texas; the Andy

Warhol Museum in Pittsburgh; the Kiasma Museum for Contemporary Art in Helsinki; Donald Judd's Chinati Foundation in Marfa, Texas; the Metropolitan Museum of Art and the Museum of Modern Art in New York; the Grand Louvre and the Centre Georges Pompidou in Paris; and many more.

The Book of L - G. Rozenberg 2012-12-06

This book is dedicated to Aristid Lindenmayer on the occasion of his 60th birthday on November 17, 1985. Contributions range from mathematics and theoretical computer science to biology.

Aristid Lindenmayer introduced language-theoretic models for developmental biology in 1968. Since then the models have been customarily referred to as L systems. Lindenmayer's invention turned out to be one of the most beautiful examples of interdisciplinary science: work in one area (developmental biology) induces most fruitful ideas in other areas (theory of formal languages and automata, and formal power series). As evident from the articles and references in this book, the interest in L systems is continuously growing. For newcomers the first contact with L systems usually happens via the most basic class of L systems, namely, DOL systems. Here "0" stands for zero context between developing cells. It has been a major typographical problem that printers are unable to distinguish between 0 (zero) and 0 (oh). Thus, DOL was almost always printed with "oh" rather than "zero", and also pronounced that way. However, this misunderstanding turned out to be very fortunate. The wrong spelling "DOL" of "DOL" could be read in the suggestive way: DO L. Indeed, hundreds of researchers have followed this suggestion. Some of them appear as contributors to this book. Of the many who could not contribute, we in particular regret the absence of A. Ehrenfeucht, G. Herman and H.A. Maurer whose influence in the theory of L systems has been most significant.

Extreme Economies - Richard Davies 2020-01-14
A New Statesman best book of the year | New

York Times Editors' Choice pick A Financial Times best economics book of 2019 An accessible, story-driven look at the future of the global economy, written by a leading expert To predict our future, we must look to the extremes. So argues the economist Richard Davies, who takes readers to the margins of the modern economy and beyond in his globe-trotting book. From a prison in rural Louisiana where inmates purchase drugs with prepaid cash cards to the poorest major city on earth, where residents buy clean water in plastic bags, from the world's first digital state to a prefecture in Japan whose population is the oldest in the world, how these extreme economies function—most often well outside any official oversight—offers a glimpse of the forces that underlie human resilience, drive societies to failure, and will come to shape our collective future. While the people who inhabit these places have long been dismissed or ignored, Extreme Economies revives a foundational idea from medical science to turn the logic of modern economics on its head, arguing that the outlier economies are the place to learn about our own future. Whether following Punjabi migrants through the lawless Panamanian jungle or visiting a day-care for the elderly modeled after a casino, Davies brings a storyteller's eye to places where the economy has been destroyed, distorted, and even turbocharged. In adapting to circumstances that would be unimaginable to most of us, the people he encounters along the way have helped to pioneer the economic infrastructure of the future. At once personal and keenly analytical, Extreme Economies is an epic travelogue for the age of global turbulence, shedding light on today's most pressing economic questions.

Marble Palaces, Temples of Art - Ingrid A. Steffensen-Bruce 1998

The era from 1890 to 1930 constituted a building boom for American art museums designed in a monumental, classical style; both the proliferation of the buildings and the ubiquity of the style seem to indicate an architectural as well as a sociocultural phenomenon. The present work is an attempt to place the American art museum building of this period into its historical milieu, and employs over one hundred illustrations and sociocultural analysis to explain the significance of both the institutions and the structures housing them to those who came into regular contact with them, including architects, patrons, journalists, and museum personnel.

Lock picking is a useful, engaging, and satisfying skill; with this book and a little determination, you'll be off to a great start.

Walker Evans - Walker Evans 2001

"As novelist and poet Andrei Codrescu points out in the essay that accompanies this selection of photographs from the Getty Museum's collection, Evans's photographs are the work of an artist whose temperament was distinctly at odds with Beals's impassioned rhetoric. Evans's

photographs of Cuba were made by a young, still maturing artist who - as Codrescu argues - was just beginning to combine his early, formalist aesthetic with the social concerns that would figure prominently in his later work."--Jacket.
