Landmarks of Tomorrow - Peter F. Drucker 2011-12-31
Landmarks of Tomorrow forecasts changes in three major areas of human life and experience. The first part of the book treats the philosophical shift from a Cartesian universe of mechanical cause to a new universe of pattern, purpose, and process. Drucker discusses the power to organize men of knowledge and high skill for joint effort and performance as

a key component of this change. The second part of the book sketches four realities that challenge the people of the free world: an educated society, economic development, the decline of government, and the collapse of Eastern culture. The final section of the book is concerned with the spiritual reality of human existence. These are seen as basic elements in late twentieth-century society. In his new introduction, Peter Drucker revisits the main findings of *Landmarks of Tomorrow* and assesses their validity in relation to today's concerns. It is a book that will be of interest to sociologists, economists, and political theorists.

Nursing Informatics - 2015
"Nursing informatics (NI) is the specialty that integrates nursing science with multiple information and analytical sciences to identify, define, manage and communicate data, information, knowledge and wisdom in nursing practice. For many people, NI, and health care informatics in

general, are about technology. This is especially true of electronic health records (EHRs) that are required of all care facilities. That is just one among many aspects of nursing informatics, a distinctive practice specialty that is the focus of this new publication. The second edition of *Nursing Informatics: Scope and Standards of Practice* is the most comprehensive, up-to-date resource available in this subject area. The book covers the full scope of nursing informatics and outlines the competency level of nursing practice and professional performance expected from all informatics nurses and nurse specialists. In addition, it details the nursing informatics competencies needed by any RN, spans all nursing careers and roles, and reflects the impact of informatics in any health care practice environment.
