Teaching Hospitals and the Urban Poor - Eli Ginzberg 2000

Annotation Academic health centers (AHCs) have played a key role in propelling the United States to world leadership in technological advances in medicine. At the same time, however, many of these urban-based hospitals have largely ignored the medical care of their poor neighbors. Now one of the leading experts in American health policy and economics ponders whether current and proposed changes in the financing and delivery of medical care will result in a realignment between AHCs and the poor. Basing his discussion on an analysis of the nation's twenty-five leading research-oriented health centers, Eli Ginzberg and his associates trace the history of AHCs in the twentieth century. He claims that AHCs are once again moving toward treating the poor because these hospitals need to admit more Medicaid patients to fill their empty beds, and their medical students need opportunities to practice in ambulatory sites. He also assesses some of the more important trends that may challenge the AHCs, including financial concerns, changing medical practice environments, and the likelihood of some form of universal health insurance.

Medical Apartheid - Harriet A. Washington
2008-01-08

NATIONAL BOOK CRITICS CIRCLE AWARD WINNER • The first full history of Black America's shocking mistreatment as unwilling and unwitting experimental subjects at the hands of the medical establishment. No one concerned with issues of public health and racial justice can afford not to read this masterful book. "[Washington] has unearthed a shocking amount of information and shaped it into a riveting, carefully documented book." —New York Times From the era of slavery to the present day, starting with the earliest encounters between Black Americans and Western medical researchers and the racist pseudoscience that resulted, *Medical Apartheid* details the ways both slaves and freedmen were used in hospitals for experiments conducted without their knowledge—a tradition that continues today within some black populations. It reveals how Blacks have historically been prey to grave-robbing as well as unauthorized autopsies and dissections. Moving into the twentieth century, it shows how the pseudoscience of eugenics and social Darwinism was used to justify experimental exploitation and shoddy medical treatment of Blacks. Shocking new details about the government's notorious Tuskegee experiment are revealed, as are similar, less-well-known medical atrocities conducted by the government, the armed forces, prisons, and private institutions. The product of

years of prodigious research into medical journals and experimental reports long undisturbed, *Medical Apartheid* reveals the hidden underbelly of scientific research and makes possible, for the first time, an understanding of the roots of the African American health deficit. At last, it provides the fullest possible context for comprehending the behavioral fallout that has caused Black Americans to view researchers—and indeed the whole medical establishment—with such deep distrust.

Florence Nightingale: The Crimean War - Lynn McDonald 2011-02-01

Florence Nightingale is famous as the “lady with the lamp” in the Crimean War, 1854—56. There is a massive amount of literature on this work, but, as editor Lynn McDonald shows, it is often erroneous, and films and press reporting on it have been even less accurate. The Crimean War reports on Nightingale's correspondence from the war hospitals and on the staggering amount of work she did post-war to ensure that the appalling death rate from disease (higher than that from bullets) did not recur. This volume contains much on Nightingale's efforts to achieve real reforms. Her well-known, and relatively “sanitized”, evidence to the royal commission on the war is compared with her confidential, much franker, and very thorough Notes on the Health of the British Army, where the full horrors of disease and neglect are laid out, with the names of those responsible.

Eating Disorders - B. Timothy Walsh
2020-06-01

Eating disorders are potentially life-threatening psychiatric illnesses commonly accompanied by serious medical problems. They typically appear during adolescence or early adulthood, a time when young people are heading to college or interviewing for a first job. Many people recover fully from eating disorders, but others become chronically ill, and symptoms can continue into middle age and beyond. Written by leading authorities in eating disorders research and treatment, *Eating Disorders: What Everyone Needs to Know®* answers common questions about eating disorders, including anorexia nervosa, bulimia nervosa, and binge eating disorder, as well as a newly described condition, avoidant/restrictive food intake disorder (ARFID). Practical yet authoritative, the book defines the eating disorders, explains what we know about them based on the latest science, and describes how treatment works.

Importantly, the book dispels common myths about eating disorders, such as the notion that they occur only amongst the affluent, that they affect only girls and women, or that they simply result from environmental factors such as the fashion industry and society's obsession with thinness. In reality, as the book explains, there is substantial evidence that eating disorders are brain-based illnesses that do not discriminate, and that they have been around for a very long time. *Eating Disorders: What Everyone Needs to Know®* is essential reading for those seeking authoritative and current information about these often misunderstood illnesses.
