Chess Master-- at Any Age - Rolf Wetzell 1994

Handbook of Stemmatology - Philipp Roelli 2020-09-07

Stemmatology studies aspects of textual criticism that use genealogical methods to analyse a set of copies of a text whose autograph has been lost. This handbook is the first to cover the entire field, encompassing both theoretical and practical aspects of traditional as well as modern digital methods and their history. As an art (ars), stemmatology's main goal is editing and thus presenting to the reader a historical text in the most satisfactory way. As a more abstract discipline (scientia), it is interested in the general principles of how texts change in the process of being copied. Thirty eight experts from all of the fields involved have joined forces to write this handbook, whose eight chapters cover material aspects of text traditions, the genesis and methods of traditional "Lachmannian" textual criticism and the objections raised against it, as well as modern digital methods used in the field. The two concluding chapters take a closer look at how this approach towards texts and textual criticism has developed in some disciplines of textual scholarship and compare methods used in other fields that deal with "descent with modification". The handbook thus serves as an introduction to this interdisciplinary field.

Big Data, Little Data, No Data - Christine L. Borgman 2015-01-02

An examination of the uses of data within a changing knowledge infrastructure, offering analysis and case studies from the sciences, social sciences, and humanities. "Big Data" is on the covers of Science, Nature, the Economist, and Wired magazines, on the front pages of the Wall Street Journal and the New York Times. But despite the media hyperbole, as Christine Borgman points out in this examination of data and scholarly research, having the right data is usually better than having more data; little data can be just as valuable as big data. In many cases, there are no data—because relevant data don't exist, cannot be found, or are not available. Moreover, data sharing is difficult, incentives to do so are minimal, and data practices vary widely across disciplines. Borgman, an often-cited authority on scholarly communication, argues that data have no value or meaning in isolation; they exist within a knowledge infrastructure—an ecology of people, practices, technologies, institutions, material objects, and relationships. After laying out the premises of her investigation—six "provocations" meant to inspire discussion about the uses of data in scholarship—Borgman offers case studies of data practices in the sciences, the social sciences, and the humanities, and then considers the implications of her findings for scholarly practice and research policy. To manage and exploit data over the long term, Borgman argues, requires massive investment in

knowledge infrastructures; at stake is the future of scholarship.

Creating the Semantic Web with RDF - Johan Hjelm 2001

The first state-of-the-art guide for Web developers who need to enable totally new services using metadata. This book offers for the first time complete guidance for Web and content developers who use Resource Description Framework (RDF) to create Web services, both wired and wireless, for metadata, or data that is maintained by an application. Written by the W3C Fellow charged with making the W3C XML standard work with other open standards, the book clearly demonstrates how RDF and metadata can greatly improve a user's Web experience through richer, better-tailored content. The author explains RDF theory and practice and how it compares to XML and HTML in layman terms and provides source code for several important tools. He includes descriptions of real services, both for the desktop computer and the handheld wireless device, and hands-on examples illustrating how metadata is used to tailor services for users. Explanations of how RDF ties in with intelligent agents are also provided.

Syntactic Atlas of the Dutch Dialects - Sjef Barbiers 2005

The Syntactic Atlas of the Dutch Dialects (SAND) provides a detailed overview of the surprisingly rich syntactic variation found in 267 dialects of Dutch at the beginning of the 21st century. More than 200 full color maps show the geographic distributieb on of over 100 syntactic variables. Many of these variables involve phenomena that are absent form the standard language and thus of great descriptive and theoretical importance. A state-of-the art linguistic description and commentary accompanies each map, taking into account the results of modern syntactic research as well as historical developments. Volume I (2005) shows the variation in complementisers and complementiser agreement, subject pronouns, subject doubling and subject clitisation after yes/ no, reflexives and reciprocals, relative clauses, question-word doubling and topicalisation. Volume II shows the variation in two- and three verb clusters, interruption of the verb clusters, extraposition and te 'to' in the verbal clusters, auxiliary selection, do-insertion, and negation and quantification.

Electronic Textual Editing - Lou Burnard 2006

The long history of textual editing and scholarship has been intimately involved with the physique of the book, which set limits on the presentation and study of text. Increasingly, since the 1980s, the written word has taken on a digital form, and the shift from codex to computer, from print to electronic media, creates new opportunities - and new difficulties. This volume offers an emerging consensus about the fundamental issues of electronic textual editing. It provides practical advice and faces theoretical questions. Its twenty-

four essays deal with markup coding and procedures, electronic archive administration, use of standards (such as Unicode), rights and permissions, and the changing and challenging environment of the Internet. Some of the specific texts discussed are Greek and Latin inscriptions, the Gospel of John, the Canterbury Tales, William Blake's poems and art, Percy Bysshe Shelley's *The Devil's Walk*, Stijn Streuvels's *De teleurgang van den Waterhoek*, Ludwig Wittgenstein's *Nachlass*, and the papers of Thomas Edison. The guidelines of the MLA's Committee on Scholarly Editions, recently revised to address electronic editions, are included in full. The CD accompanying this volume contains the complete text of the Text Encoding Initiative guidelines (P4 edition) in both HTML and PDF formats.

The Zero Marginal Cost Society - Jeremy Rifkin 2014-04-01

In *The Zero Marginal Cost Society*, New York Times bestselling author Jeremy Rifkin describes how the emerging Internet of Things is speeding us to an era of nearly free goods and services, precipitating the meteoric rise of a global Collaborative Commons and the eclipse of capitalism. Rifkin uncovers a paradox at the heart of capitalism that has propelled it to greatness but is now taking it to its death—the inherent entrepreneurial dynamism of competitive markets that drives productivity up and marginal costs down, enabling businesses to reduce the price of their goods and services in order to win over consumers and market share. (Marginal cost is the cost of producing additional units of a good or service, if fixed costs are not counted.) While economists have always welcomed a reduction in marginal cost, they never anticipated the possibility of a technological revolution that might bring marginal costs to near zero, making goods and services priceless, nearly free, and abundant, and no longer subject to market forces. Now, a formidable new technology infrastructure—the Internet of things (IoT)—is emerging with the potential of pushing large segments of economic life to near zero marginal cost in the years ahead. Rifkin describes how the Communication Internet is converging with a nascent Energy Internet and Logistics Internet to create a new technology platform that connects everything and everyone. Billions of sensors are being attached to natural resources, production lines, the electricity grid, logistics networks, recycling flows, and implanted in homes, offices, stores, vehicles, and even human beings, feeding Big Data into an IoT global neural network. Prosumers can connect to the network and use Big Data, analytics, and algorithms to accelerate efficiency, dramatically increase productivity, and lower the marginal cost of producing and sharing a wide range of products and services to near zero, just like they now do with information goods. The plummeting of marginal costs is spawning a hybrid economy—part capitalist market and part Collaborative Commons—with far reaching implications for society, according to Rifkin. Hundreds of millions of people are already transferring parts of their economic lives to the global Collaborative Commons. Prosumers are plugging into the fledgling IoT and making and sharing their own information, entertainment, green energy, and 3D-printed products at near zero marginal cost. They are also sharing cars, homes, clothes and other items via social media sites, rentals, redistribution clubs, and cooperatives at low or near zero marginal cost. Students are enrolling in free massive open online courses (MOOCs) that operate at near zero marginal cost. Social entrepreneurs are even bypassing the banking establishment and using crowdfunding to finance startup businesses as well as creating alternative currencies in the fledgling sharing economy. In this new world, social capital is as important as financial capital, access trumps ownership, sustainability supersedes consumerism, cooperation ousts competition, and "exchange value" in the capitalist marketplace is increasingly replaced by "sharable value" on the Collaborative Commons. Rifkin concludes that capitalism will remain with us, albeit in an increasingly streamlined role, primarily as an aggregator of network services and solutions, allowing it to flourish as a powerful niche player in the coming era. We are, however, says Rifkin, entering a world beyond markets where we are learning how to live together in an increasingly interdependent global Collaborative Commons.

Digital Scholarly Editing - Elena Pierazzo 2016-03-16

This book provides an up-to-date, coherent and comprehensive treatment of digital scholarly editing, organized according to the typical timeline and workflow of the preparation of an edition: from the choice of the object to edit, the editorial work, post-production and publication, the use of the published edition, to

long-term issues and the ultimate significance of the published work. The author also examines from a theoretical and methodological point of view the issues and problems that emerge during these stages with the application of computational techniques and methods. Building on previous publications on the topic, the book discusses the most significant developments in digital textual scholarship, claiming that the alterations in traditional editorial practices necessitated by the use of computers impose radical changes in the way we think and manage texts, documents, editions and the public. It is of interest not only to scholarly editors, but to all involved in publishing and readership in a digital environment in the humanities.

Hypermedia and the Web - David Lowe 1999

Hypermedia & the Web An Engineering Approach David Lowe, University of Technology, Sydney, Australia
Wendy Hall, University of Southampton, UK The rich online world offered through the Web is marred by the chaos which underlies it. At the very early stages of understanding how to harness the power of this new medium, electronic document creators, managers and researchers often spend time on technology innovations at the expense of adopting the sound engineering principles which have paid such dividends in the software industry. *Hypermedia & the Web* approaches interactive information (concentrating on hypertext documents) as a structure requiring management, quantification and documentation. From analysing the purpose for which a website, CD-ROM or online archive is created, assessing the characteristics and resources needed for the process of building each one, to the assessment of the end product itself, this book attempts to carve out features that are essential to the successful structuring of information in an electronic environment. This is an ambitious book charting an emerging discipline. It is an essential tool to help developers and educators shape and maintain useful and relevant electronic information. 'Hypermedia Engineering hasn't produced many tangible benefits in real-life situations, because very few people practise it. That's why the book is needed.' David Barron, Southampton University 'This book is interesting and excellently fulfills a current need [by] providing an exhaustive and up-to-date vision of the hypermedia field.' Fabio Vitali, University of Bologna 'The strength of this book is its breadth - it covers many of the issues in hypermedia with examples from the technical to the managerial. Students could use these as starting points when designing or evaluating hypermedia systems.' David Sharp, Imperial College of Science and Technology 'Information systems developers and managers should find this a helpful guide for developing hypermedia applications.' Advertising and the World Wide Web - David W. Schumann 1999-04-01

The chapters provide a wide-ranging view of issues addressing how advertisers can proceed on the Internet

and World Wide Web. An initial chapter traces the development of Web advertising from its very beginnings as it was represented and discussed in the pages of Advertising Age. Although there is a noticeable trend to define Web advertising by comparing it to traditional media, it is clear that Web advertising just won't fit the old mold. Keith Reinhard of DDB Needham actually articulates this linkage between the old and new in his invited chapter. What the reader will encounter in Advertising and the World Wide Web is a solid conception of how Web advertising is different from anything that has come before. There are numerous discussions on consumer and advertiser interactivity, the role of Web advertising within larger campaigns, audience segmentation, and alternative Web-based promotion formats. The five sections cover definition and theory, structure, specific applications, legal issues, and the voice of the practitioner. Although there remain a few nay-sayers concerning the future of Web advertising, the reader will be able to see just how incredibly high-impact this new medium has become and the vast potential that it holds for future promotional endeavors.

Polyominoes: A Guide to Puzzles and Problems in Tiling - George E. Martin 2020-08-03

Polyominoes will delight not only students and teachers of mathematics at all levels, but will be appreciated by anyone who likes a good geometric challenge. There are no prerequisites. If you like jigsaw puzzles, or if you hate jigsaw puzzles but have ever wondered about the pattern of some floor tiling, there is much here to interest you. A polyomino is a shape cut along the lines from square graph paper; the pronunciation of polyomino begins as does polygon and ends as does domino. Tilings, also called tessellations of mosaic patterns, are older than civilization itself. Tiling with polyominoes provides challenges that range from the popular jigsaw-like puzzles to easily understood mathematical research problems. You will find unsolved puzzles and problems of both kinds here. Answers are provided for most of the problems that have known solutions. It is only fair to repeat here the warning stated in the preface to this book, "Playing with polyominoes can be habit forming."

The papers of this volume are organized in topical sections on: digital manufacturing; industrial product design; logistics, production and operation management; manufacturing material; manufacturing optimization; manufacturing process; mechanical transmission system; robotics.

Writing Systems - Geoffrey Sampson 1985

To say that writing has as much claim as speech to be treated as language may strike the reader as a statement of the obvious. But the fact is that, although the tide is beginning to turn now, for most of the twentieth century linguistics has almost wholly ignored writing. It is not necessary to accept all the theories of the French critic Jacques Derrida in order to agree with him when he describes writing as "the

wandering outcast of linguistics." This book is offered in the belief that written language is a form of language. As such, it deserves to be treated with the methods of modern, scientific linguistic study, which have been increasing our understanding of the spoken form of language for many decades.

HTML and the Art of Authoring for the World Wide Web - Bebo White 1996-04-30

The scenes at Wellington's Westpac Stadium when the All Whites qualified for the 2010 FIFA World Cup in November were unprecedented in New Zealand. The 'White-out' by the fans helped inspire Ricki Herbert's team to a famous 1-0 win against Bahrain - a result which sent the All Whites to the World Cup for only the second time in history. All White Fever uncovers the story behind one of the greatest achievements in New Zealand sport. Celebrated author John Matheson - the name behind number one bestsellers like Christian Cullen's biography Life on the Run, Eric Rush's Gold Rush and the 2008 tribute to coaching legend Robbie

Deans - has produced a book that follows the career paths of some of the key players in this magical football story, paths that culminated on that glorious November night last year. Thanks to countless original interviews and some painstaking research, the author: details the passionless state of the team when Herbert took charge of the team for the first time in 2005; explores how he went about rebuilding the ethos of the side; turns back the clock to the giant shadow that was hanging over the current generation of All Whites - the 1982 champion team; chronicles how Herbert and then-CEO Graham Seatter planned their assault on South Africa; relives the Road to South Africa with a game-by-game account; profiles the stars of the campaign including inspirational skipper Ryan Nelsen and goal-scoring hero Rory Fallon; provides pen-pics of the men charged with success in South Africa; and, along with some All Whites legend, controversially picks New Zealand's greatest ever All Whites side. All White Fever is a must-read for football fans ahead of the Greatest Show on Turf in June.
