Anaesthesia, Pain, Intensive Care and Emergency Medicine

— A.P.I.C.E. - A. Gullo

2012-12-06

Basic research, progress in technology and informatics, and the success of clinical pharmacology are the fundamental bases of this interesting field of medicine.

Nowadays, critical care medicine is no longer for experts only, but it is a field in which researchers and clinicians, nurses and technical staff work in an interdisciplinary way, each offering their own skills. The volume is divided in six sections, devoted to critical

care key issues, to lung diseases, to trauma, to acid-base equilibrium, to perioperative medicine, and to obstetrics.

Back To Basics - Orchid Lee Lopez 2011-02-15

As a registered nurse for the last 28 years, my primary clinical expertise has been working in the pre-hospital environment as a flight nurse and a paramedic, as well as continuing to work in a variety of clinical areas which include the emergency department, pediatrics and endoscopy. My extensive clinical background has also given me the opportunity to work as a legal nurse consultant with one of the largest law firms in Arizona. As an EMS educator and program director of paramedic training programs for the last 20 years and most recently as the National Clinical Educator for one of the largest air medical transport

companies, I truly enjoy teaching in a simple manner as to assure that students do have a strong basic understanding in making critical care decisions and that they will be providing the highest quality of patient care beginning from the least to the most invasive management of care for the patients they are transporting. My goal as a professional and as an EMS educator has always been and will continue to encourage students to have the desire to learn and grow in their profession, as well as contribute to EMS in a way that inspires positive change. The Future of Nursing -

Institute of Medicine

2011-02-08

The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to

meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and

institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.
