Global warming continues to gain importance on the international agenda and calls for action are

heightening. Yet, there is still controversy over what must be done and what is needed to proceed. Policy Implications of Greenhouse Warming describes the information necessary to make decisions about global warming resulting from atmospheric releases of radiatively active trace gases. The conclusions and recommendations include some unexpected results. The distinguished authoring committee provides specific advice for U.S. policy and addresses the need for an international response to potential greenhouse warming. It offers a realistic view of gaps in the scientific understanding of greenhouse warming and how much effort and expense might be required to produce definitive answers. The book presents methods for assessing options to reduce emissions of greenhouse gases into the atmosphere, offset emissions, and assist humans and unmanaged systems of plants and animals to adjust to the consequences of global warming.

The Retreat From Class - Ellen Meiksins Wood 1998

In this classic study, which won the Isaac Deutscher Memorial Prize, Ellen Wood provides a survey of influential trends in contemporary Marxist theory. Identifying a common trend to dissociate political analysis from class interest, she pursues her own conception of the complex but undeniable relations between class, politics

and ideology. In a new introduction, Wood discusses the relevance of *The Retreat From Class* in a post-Soviet world. She locates post-Marxism as a predecessor to current academic trends such as postmodernism, and argues that a re-examination of class politics by academia is one way out of the current, cynical acceptance of capitalism.
