State and Local Public Finance

- Ronald C. Fisher 2018-09-03

Now in its 4th edition, *State and Local Public Finance* provides a comprehensive and sophisticated analysis of state and local government public finance practices and issues, using the basic tools of economics. For this new edition, there is a focus on the most important services provided in the state-local sector: education, health and welfare, public safety, and transportation. This textbook provides an examination and analysis of public finance practices and problems in a federal fiscal system, focusing on the fiscal behaviour and policies of state and local governments. The author presents detailed descriptions of significant institutions. Modern economic theory is applied to examine the way these institutions are used to produce and finance services, and to provide evaluation of alternative policies. Although the emphasis is on U.S. institutions and issues, much of the economic analysis can be applied to any federal system

or to fiscal decentralization. This fully revised new edition sees updates throughout to data, topics, and applications. The Headlines and Applications sections reflect the most current policy issues affecting state and local governments. These include the effects of the Great Recession on state and local governments, changes in the tax treatment of internet purchases, the Affordable Care Act and implications for Medicaid spending by state governments, demographic changes and the implications for state-local finances, the implications of changes in automobile technology for transportation financing, and the potential for increased gambling activity. This text will continue to be invaluable reading for those who study public finance, local government finance, urban economics and public policy and public administration. *Coping with the Collapse of the Old Order:* - Kenneth Hall 2013-02-19

On July 4, 2009, the region celebrated thirty-six years as a

formal Caribbean Community (CARICOM). The analyses contained in this publication in the The Integrationist Series all tend to suggest that CARICOM now, more than ever, needs to transform its experiences over these years into a more structured foundation for maximising the multiplier effects of collective representation, and for leveraging CARICOMs diplomatic efforts and resources in a more coordinated and integrated manner. This imperative is necessitated by the rapidly changing international environment which has far too often impacted negatively on small developing countries, leaving them increasingly vulnerable and marginalized. *The New Public Finance* - Inge Kaul 2006-02-23

The world's agenda of international cooperation has changed. The conventional concerns of foreign affairs, international trade, and development assistance, are increasingly sharing the political center stage with a

new set of issues. These include trans-border concerns such as global financial stability and market efficiency, risk of global climate change, bio-diversity conservation, control of resurgent and new communicable diseases, food safety, cyber crime and e-commerce, control of drug trafficking, and international terrorism and weapons of mass destruction. Globalization and increasing porosity of national borders have been key driving forces that have led to growing interdependence and interlocking of the public domains--and therefore, public policy concerns--of countries, governments, private businesses, civil society, and people at large. Thus, new and different issues are now occupying top places on national policy agendas, and consequently, on the agendas of international negotiating forums. The policy approaches to global challenges are also changing. A proliferation and diversification of international cooperation efforts include focus on financing

arrangements. Financing of international cooperation in most instances is a haphazard and non-transparent process and often seems to run parallel to international negotiations. There are many unfunded mandates and many non-mandatory funds. To agree on and to achieve international economic goals, we need to understand how financing of international cooperation efforts actually works. Our understanding is hampered by two gaps: 1) lack of an integrated and cohesive theoretical framework; 2) lack of consolidated empirical and operational knowledge in the form of a comprehensive inventory of past, current and possible future (i.e. currently deliberated) financing mechanisms. This book reduces these two gaps and provides a guide to improve our ability to finance international cooperation.

Management, Technology and Human Resources Policy in the Arctic (The North) - L. Lyck 2012-12-06

In social science terms, the 'Arctic' is a relative, not an absolute concept, relating to

several dimensions, such as constitutional and geographic status, remoteness, socioeconomic status, and demographic/anthropological factors. There is only one sovereign state with all its territory situated in the Arctic (Iceland), but many other areas of the globe have shared characteristics (Alaska, Yukon, Northwest Territories, areas of Norway, Sweden and Finland north of the Polar Circle, Greenland, the Faroes). Remoteness has to do with distance from the centre as well as accessibility, transportation and communication.

Socioeconomically, the Arctic is characterised by a low population density, a fragile natural environment, and overwhelming economic dependence on one or a few resources, often coupled with income transfer.

Demographically, the region has a large number of indigenous peoples, heavy immigration from the South (albeit only seasonal), minority problems, immigrant

majorities, high infant mortality, low expected lifespan. The present book is the first to present a large number of articles on the contemporary social, economic and political development in the Arctic, written by social scientists from Russia and the western world, many of whom live and conduct their research in the region. The book thus presents a much more complete picture of the modern world of the Arctic, offering a unique opportunity to compare what is happening in the different parts of the region. Jamison 2017-12-06

As the culminating volume in the DCP3 series, volume 9 will provide an overview of DCP3 findings and methods, a summary of messages and substantive lessons to be taken from DCP3, and a further discussion of cross-cutting and synthesizing topics across the first eight volumes. The introductory chapters (1-3) in this volume take as their starting point the elements of the Essential Packages presented in the overview chapters of each volume. First, the chapter on intersectoral policy priorities for health includes fiscal and intersectoral policies and assembles a subset of the population policies and applies strict criteria for a low-income setting in order to propose a "highest-priority" essential package. Second, the chapter on packages of care and delivery platforms for universal health coverage (UHC) includes health sector interventions, primarily clinical and public health services, and uses the same approach to propose a highest priority

package of interventions and policies that meet similar criteria, provides cost estimates, and describes a pathway to UHC.

The Global Financial Crisis and Its Aftermath - A. G. Malliaris 2016

... Expert contributors argue that the complexity of the Global Financial Crisis challenges researchers to offer more comprehensive explanations by extending the scope and range of their traditional investigations. To achieve this, the volume views the financial crisis simultaneously through three different lenses--economic, psychological, and social values ... They recognize how current economic analysis did not prepare academic economists, business economists, traders, and regulators to anticipate economic and financial crises ...

Overcharged - Charles Silver
2018-07-03

Why is America's health care

system so expensive? Why do hospitalized patients receive bills laden with inflated charges that com out of the blue from out-of-network providers or demands for services that weren't delivered? Why do we pay \$600 for EpiPens that contain a dollar's worth of medicine? Why is more than \$1 trillion - one out of every three dollars that passes through the system - lost to fraud, wasted on services that don't help patients, or otherwise misspent? Overcharged answers these questions. It shows that America's health care system, which replaces consumer choice with government control and third-party payment, is effectively designed to make health care as expensive as possible. Prices will fall, quality will improve, and medicine will become more patient-friendly only when consumers take charge and exert pressure from below. For this to happen, consumers must control the money. As Overcharged explains, when health care providers are

subjected to the same competitive forces that shape other industries, they will either deliver better services more cheaply or risk being replaced by someone who will.
