Sea Kayaking - Philip Woodhouse 2013-12-16

In Sea Kayaking, , comprehensive guide for those who travel the open waters in the Southern Hemisphere, Philip Woodhouse, Australian paddler and Royal Australian Air Force veteran, shares his years of experience, technical training, and military teaching skills. What began as a personal reference was soon developed as a training manual, recommended by the Victorian Sea Kayak Club to its members and East Coast Kayaking to their patrons and Australian Canoeing students. Sea Kayaking covers boat design, kit requirements, paddling skills, health and well-being, meteorology, the ocean environment, navigation, communications, conservation and minimal-impact camping, conservation, seamanship, electrical bilge pumps, solar panels, light sources, boat repairs, leadership, risk management, basic safety and survival strategies, as well as a brief overview about the history and various types of canoeing.. There is also a comprehensive glossary to assist the reader in understanding the terms and concepts discussed in the main text. Woodhouse's work differs from most manuals about sea kayaking in that it is written from the perspective of someone who paddles the Southern Hemisphere. As such, the major differences between the two hemispheres weather patterns, navigation, laws, and terminology are discussed, as well as compared to their Northern Hemisphere counterparts. In the end, paddling skills are paddling skills, hypothermia is hypothermia, and twenty-five-knot winds are twenty-five-knot winds. A three-metre tidal range can still produce a long haul across mud flats when the tide is out and landing through two-metre surf is still scary (though a lot of fun), no matter where you paddle.

Cruising the Queensland Coast: 2023 Edition - Greg Luck 2022-10-23

Cruising the Queensland Coast is a cruising guide for yachts cruising the Queensland coast. Each of the 13 coasts, from the Gold Coast to the Cooktown Coast, is covered in detail, including marinas, anchorages, passages, wind and wave averages, public pontoons and quick reference information and links for vital weather, search and rescue, notices to mariners and other vital information. It features hundreds of chartlets and high-resolution aerial photos of anchorages to take the guesswork out of anchoring. Each anchorage has information on depth, bottom, mobile reception, marine park zone and recommended wind directions and strengths. The book is also integrated with Navionics and C-Map. Anchorages and passages can be imported into Navionics and C-Map simply by clicking on the Navionics link [□](#) and GPX link [□](#) icons throughout the book. The book also provides an extensive reference of useful information for the Queensland Coast such as skills and experience, recommended apps, charts and books, equipping the yacht for cruising, cruising logistics, climate and weather systems, marine hazards and the three major marine parks and their rules. This book will help get the first-time cruiser of the Queensland coast started. For those familiar with the coast, the wealth of information, data and links all pulled together into one place and organised in a systematic way will prove invaluable. For both, the more than one thousand external reference links make it easier to cruise the coast safely and simplify many of the everyday tasks of living on a cruising yacht such as finding and entering a marina and restocking once there.
