1-57440-085-1 explores how technology trainers and educators at American colleges are planning to improve the computer literacy skills of faculty, staff and students. The report presents case studies from nine institutions of higher education, including-- Brooklyn Law School, Florida State University College of Medicine, The Tuskegee Institute, University of West Georgia, Clemson, Indiana University Southeast, Texas Christian, and others. At Texas Christian, a new technology lab devoted to teaching new media writing, established and run by professors from the University's English Department, has challenged some of the traditional notions of what writing education should be. For the Teaching and Learning Technology Group, a non-profit corporation that counsels colleges in proper technology instruction and implementation, cross-departmental and administrative collaboration is a key factor. Technology literacy is a philosophy, not just

a program of study, and continuous needs assessment, always focused on educational outcomes, followed up by action at all levels, is the key to success. Indiana University Southeast has developed a new informatics major that fills a gap between casual information technology training, inadequate for many students, and the computer science major, insufficiently practical for some. Florida State University College of Medicine has developed a highly detailed and integrated informatics program for medical students; the program is integrated into virtually every course offered by the College. For Florida State, the key has been broad institutional support, including the provision of laptops to students, as well as the necessary support personnel to service them. At the South Carolina Center of Excellence for Instructional Technology Training at Clemson University, the mission is to support teacher training and teacher preparation. Chris Peters, the director of the

Center, notes that its mission, like that of the Indiana University Southeast informatics program, is to allow IT professionals to assume some of the load of teaching technology-related classes within a particular discipline, in this case, K-12 teacher training. At the University of West Georgia, Melanie Clay, the Director of Distance Learning, has found success in training the hundreds of distance learning instructors employed by the college by taking a cue from Japanese auto manufacturers, whose just-in-time inventory management methods significantly improved efficiency in auto manufacturing. The Appalachian College Association, an organization set up largely to improve the quality of instruction in higher education in Appalachia, developed a novel approach to computer literacy, by educating both instructor and student together. Martin Ramsay, Chief Technologist for the organization, won a grant

to develop a special program that pairs professor and student in a three-day technology workshop. At the Tuskegee Institute in Alabama, technology coordinator Jacqueline McArthur has been able to increase the number of regular Blackboard users among faculty from twenty five to one hundred and twenty five in just a few months. At Brooklyn Law School, the development of a training oriented computer laboratory, combined with discreet but timely marketing, has helped to break down the walls between technology end users and trainers. Lloyd Carew-Reid, a technology-training specialist at the School, believes that timely marketing - through brown bag lunches, scheduled visits, and short but highly focused drop in sessions - are keys to taking technology training to the end user.

### **Firearm Safety Certificate - Manual for California Firearms Dealers and DOJ Certified Instructors -**

California Department of Justice 2016-12

The growing concern over the number of accidental firearm shootings, especially those involving children, prompted passage of the initial handgun safety law which went into effect in 1994. The stated intent of the California Legislature in enacting the current FSC law is for persons who obtain firearms to have a basic familiarity with those firearms, including, but not limited to, the safe handling and storage of those firearms. The statutory authority for this program is contained in Penal

Code sections 26840 and 31610 through 31700. These statutes mandate DOJ to develop, implement and maintain the FSC Program. Pursuant to Penal Code section 26840, a firearms dealer cannot deliver a firearm unless the person receiving the firearm presents a valid FSC, which is obtained by passing a written test on firearm safety. Prior to taking delivery of a firearm from a licensed firearms dealer, the purchaser/recipient must also successfully perform a safe handling demonstration with that firearm..

and fugitive form one of the most exhaustive FBI manhunts in history and have spawned dozens of articles, books, films, and documentaries. Since his release from federal prison, in 1998, Mitnick has turned his life around and established himself as one of the most sought-after computer security experts worldwide. Now, in *The Art of Deception*, the world's most notorious hacker gives new meaning to the old adage, "It takes a thief to catch a thief." Focusing on the human factors involved with information security, Mitnick explains why all the firewalls and encryption protocols in the world will never be enough to stop a savvy grifter intent on rifling a corporate database or an irate employee determined to crash a system. With the help of many fascinating true stories of successful attacks on business and government, he illustrates just how susceptible even the most locked-down information systems are to a slick con artist impersonating an IRS agent. Narrating from the points of view of both the

attacker and the victims, he explains why each attack was so successful and how it could have been prevented in an engaging and highly readable style reminiscent of a true-crime novel. And, perhaps most importantly, Mitnick offers advice for preventing these types of social engineering hacks through security protocols, training programs, and manuals that address the human element of security.
