Study & Master Life Sciences was developed by practising teachers, and covers all the requirements of the National Curriculum Statement for Life Sciences. Learner's Book: □ module openers, explaining the outcomes Ž icons, indicating group, paired or individual activities Ž key vocabulary boxes, which assist learners in dealing with new terms Ž activities to solve problems, design solutions, set up tests/controls and record results Ž assessment activities Ž case studies, and projects, which deal with issues related to the real world, and move learners beyond the confines of the classroom Teacher's Guide: Ž An overview of the RNCS Ž an introduction to outcomes-based education Ž a detailed look at the Learning Outcomes and Assessment Standards for Life Sciences, and how much time to allocate to each during the year Ž information on managing assessment Ž solutions to all the activities in the Learner's Book Ž photocopiable assessment sheets

Show Me the Bone - Gowan Dawson
2016-04-21

Nineteenth-century paleontologists, such as Georges Cuvier and Richard Owen, were heralded as scientific virtuosos, sometimes even veritable wizards, capable of resurrecting the denizens of an ancient past from a mere glance at a fragmentary bone. Such extraordinary feats of predictive reasoning relied on the law of correlation, which proposed that each element of an animal corresponds mutually with each of the others, so that a carnivorous tooth must be accompanied by a certain kind of jawbone, neck, stomach, limbs and feet. 'Show Me the Bone' tells the story of the rise and fall of this famous claim.

ENC Focus -

Self-organization and Emergence in Life Sciences - Bernard Feltz 2006-07-10

Self-organization constitutes one of the most important theoretical debates in contemporary life sciences. The present book explores the relevance of the concept of self-organization and its impact on such scientific fields as:

immunology, neurosciences, ecology and theories of evolution. Historical aspects of the issue are also broached. Intuitions relative to self-organization can be found in the works of such key western philosophical figures as Aristotle, Leibniz and Kant. Interacting with more recent authors and cybernetics, self-organization represents a notion in keeping with the modern world's discovery of radical complexity. The themes of teleology and emergence are analyzed by philosophers of sciences with regards to the issues of modelization and scientific explanation. The implications of self-organization for life sciences are here approached from an interdisciplinary angle, revealing the notion as already rewarding and full of promise for the future.

Research Handbook on Intellectual Property and the Life Sciences - Duncan

Matthews 2017-06-30

Intellectual property (IP) is a key component of the life sciences, one of the most dynamic and innovative fields of technology today. At the same time, the relationship between IP and the life sciences raises new public policy dilemmas. The Research Handbook on Intellectual Property and the Life Sciences comprises contributions by leading experts from academia and industry to provide in-depth analyses of key topics including pharmaceuticals, diagnostics and genes, plant innovations, stem cells, the role of competition law and access to medicines. The Research Handbook focuses on the relationship between IP and the life sciences in Europe and the United States, complemented by country-specific case studies on Australia, Brazil, China, India, Japan, Kenya, South Africa and Thailand to provide a truly international perspective.

These essays grew out of an effort at the EMBL to promote a new form of science communication on the social, ethical, and political issues that surround rapid change in the life sciences. Published in the Journal of Molecular Biology, these eighteen essays address the main topics of the future of the biosciences, biosciences and basic values, genomics and the globalization of biology, science miscommunication, and reproductive technologies. Hot topics such as cloning, genomics, reproductive technologies, health care costs are addressed. Key Features * Significant to those in the life sciences and social sciences * Features an Introduction by Halldór Stefánsson * Published in conjunction with the prestigious European Molecular Biology Laboratory (EMBL)

Intellectual Property Rights and the Life Science Industries - Graham Dutfield 2009

This book is a highly readable and entertaining account of the co-evolution of the patent system and the life science industries since the mid-19th

century. The pharmaceutical industries have their origins in advances in synthetic chemistry and in natural products research. Both approaches to drug discovery and business have shaped patent law, as have the lobbying activities of the firms involved and their supporters in the legal profession. In turn, patent law has impacted on the life science industries. Compared to the first edition, which told this story for the first time, the present edition focuses more on specific businesses, products and technologies, including Bayer, Pfizer, GlaxoSmithKline, aspirin, penicillin, monoclonal antibodies and polymerase chain reaction. Another difference is that this second edition also looks into the future, addressing new areas such as systems biology, stem cell research, and synthetic biology, which promises to enable scientists to 'invent' life forms from scratch.

Contents: Seven Tales of a Patent; Patents and the Life Science Industries in the Modern Economy; Past: Dyes, Drugs and Domagk; Adrenaline Rushes ? Isolate, Purify ? and Patent; Science and Drug Discovery ? Ignorance, Serendipity and Rational Drug Design; Aspirin; Insulin; Penicillin and the Antibiotics; Cortisone and the Steroids; Polymerase Chain Reaction; The Gene Patent Wars; Innovations without Patents? The Polio Vaccine and Monoclonal Antibodies; Present: Big Pharma, Small Biotech; Crises, Backlashes and Counter-backlashes; Would We Have Got Where We are Today without Patents?; Future: Systems Biology, Stem Cells, 'Synbio' and the Future of Patents.

Explanation in Biology - Pierre-Alain Braillard
2015-06-10

Patterns of explanation in biology have long been recognized as different from those deployed in other scientific disciplines, especially that of physics. Celebrating the diversity of interpretative models found in biology, this volume details their varying types as well as explaining their relationships to one another. It covers the key differentials with other sciences in the nature of explanation, such as the existence in biology of varieties unheard of in the physical sciences, such as teleological, evolutionary and even functional explanations. Offering a wealth of fresh analysis of the phenomenon, chapters examine aspects ranging

from the role of mathematics in explaining cell development to the complexities thrown up by evolutionary-developmental biology, where explanation is altered by multidisciplinary itself. They cover major domains such as ecology and systems biology, as well as contemporary trends, such as the mechanistic explanations spawned by progress in molecular biology. With contributions from researchers of many different nationalities, the book provides a many-angled perspective on a revealing feature of the discipline of biology.

To Run for Life from Swastika and Red Star
- Alfred Reinfeld 2002

When the Germans invaded Poland in September 1939, the author and his father were drafted into the Polish Army. After a few days of hopeless fighting, the brigade in which the author served was routed and dispersed. This precipitated a headlong flight of soldiers and civilians alike, anxious to escape the murderous attack of the rapidly advancing enemy armored columns and their attendant aircraft, which ceaselessly bombed and strafed roads and villages. For some three weeks, Aaron Reinfeld and his father desperately sought to escape the Nazi onslaught by fleeing eastward to the Russian border and the perceived safety that country offered. It was a harrowing ordeal covering hundreds of kilometers, during which the Reinfelds endured

hunger, exposure, bombing, shelling and countless dangers on roads clogged with millions of terrified, escaping refugees. At the outbreak of war, the author lived a comfortable life in a reasonably affluent home in the town of Lodz, and was about to complete his last year of high school. Little did he know it would be more than a decade before he could complete his education and obtain a degree in textile engineering from Nottingham College in England. In that decade, the author survived many trials by fire and mortal danger, first in escaping from the Nazis, then fighting the Germans in North Africa as a soldier in the British Army, and finally serving in the Israeli Army in that country's bloody war for independence. While he managed to escape the fires of the Holocaust, his mother, sister and most members of his extended family were consumed in it along with six million Jews and untold numbers of gentiles. Running from the advancing Nazis, the author and his father, through sheer determination, willpower to survive and luck, managed to reach the Russian Zone of Occupation and its temporary safety. Soon, however, they found they had to flee from the Russians as well when they began deporting into the Siberian hinterland capitalists, professionals and the intelligentsia, who were unlikely to hew to the Soviet ideology and order. Fleeing the Russians, the Reisfelds brought off another harrowing escape, this time by crossing a raging river in the middle of a cold, wintry night into Romania, where they hoped to find a temporary haven. Because they had crossed illegally into the country, the author and his father were apprehended by the Romanian police and forced to serve a brief jail sentence before being set free and allowed to stay in that country. From their base in Bucharest, Reisfeld's father tried to arrange for his mother's and sister's escape from Nazi occupied Poland. Such arrangements were difficult to make, but possible by bribing the right police and Nazi

officials. Reisfeld's father succeeded in making those arrangements, and his mother and sister were set to travel to then neutral Italy from where they could continue on to Palestine. But just as they were about to depart, Italy entered the war on Germany's side, thus trapping them in Poland and sealing their doom. The security they found in Romania did not last as both Germany and the Soviets were poised to march into Romania and partition the country between them. The Reisfelds had to flee once again before they could be overtaken by their dreaded enemies. They managed to book passage on one of the last passenger ships to leave Romania, barely days ahead of the German occupation. After a tour of eastern Mediterranean ports, the Reisfelds finally landed in Haifa where they were taken in by family members already established in Palestine. Yet, this was hardly the end of the author's peregrinations. With the war raging in North Africa and creeping closer to Palestine, Aaron joined the British Army's Corp of Royal Engineers as a sapper lifting and planting mines, blowing up fortifications, and building and destroying bridges, among ot

KI 2009: Advances in Artificial Intelligence - Marcus Hund 2009-09-18

This book constitutes the thoroughly refereed proceedings of the 32nd Annual German Conference on Artificial Intelligence, KI 2009, held in Paderborn, Germany, in September 2009. The 76 revised full papers presented together with 15 posters were carefully reviewed and selected from 126 submissions. The papers are divided in topical sections on planning and scheduling; vision and perception; machine learning and data mining; evolutionary computing; natural language processing; knowledge representation and reasoning; cognition; history and philosophical foundations; AI and engineering; automated reasoning; spatial and temporal reasoning; agents and intelligent virtual environments; experience and knowledge management; and robotics.
