Lesson Study Research and Practice in Mathematics Education - Lynn C. Hart 2011-01-11

Lesson study is a professional development process that teachers engage in to systematically examine their practice, with the goal of becoming more effective. Originating in Japan, lesson study has gained significant momentum in the mathematics education community in recent years. As a process for professional development, lesson study became highly visible when it was proposed as a means of supporting the common practice of promoting better teaching by disseminating documents like standards, benchmarks and nationally validated curricula. While the body of knowledge about lesson study is growing, it remains somewhat elusive and composed of discrete research endeavors. As a new research area there is no coherent knowledge base yet. This book will contribute to the field bringing the work of researchers and practitioners together to create a resource for extant work. This book describes several aspects of Lesson Study, amongst others: it gives an historical overview of the concept, it addresses issues related to learning and teaching mathematics, it looks at the role of the teacher in the process. The last two sections of the book look at how lesson Study can be used with preservice mathematics teachers and at university mathematics methods teaching.

The 8% Solution - Michael Schumacher 1999-12-22

The public perception is that juvenile crime is out-of-hand and that no one can do anything about it. Research, however, shows that a mere 8% of juvenile offenders arrested and sent to juvenile court commit more than half of all repeat juvenile crimes, including violence. And, something is being done about it! The surprising fact is that this "8%" can be picked out at the time of their first arrest. This book represents seven years of research on 6,400 young people having their first brush with the law in Orange County, California. It provides an exemplary state-supported model now used in six other California counties to curb the rise in the arrest of kids. A practical, commonsense guide, this book focuses on long-term solutions to the problem of serious repeat juvenile crime and offers a proven pathway for improvement. The 8% Solution informs students, policy makers, criminal justice professionals, juvenile courts, probation departments, and parents of how to mount a successful response. Written in narrative style with a liberal use of anecdotal incidents, this is an easy-to-read description of the characteristics of kids who repeatedly get in trouble with the law and more cost-effective ways to correct the problem.

Cracking the GMAT CAT. - 2000

How People Learn - National Research Council 2000-08-11

First released in the Spring of 1999, How People Learn has been expanded to show how the theories and

insights from the original book can translate into actions and practice, now making a real connection between classroom activities and learning behavior. This edition includes far-reaching suggestions for research that could increase the impact that classroom teaching has on actual learning. Like the original edition, this book offers exciting new research about the mind and the brain that provides answers to a number of compelling questions. When do infants begin to learn? How do experts learn and how is this different from non-experts? What can teachers and schools do-with curricula, classroom settings, and teaching methods--to help children learn most effectively? New evidence from many branches of science has significantly added to our understanding of what it means to know, from the neural processes that occur during learning to the influence of culture on what people see and absorb. How People Learn examines these findings and their implications for what we teach, how we teach it, and how we assess what our children learn. The book uses exemplary teaching to illustrate how approaches based on what we now know result in in-depth learning. This new knowledge calls into question concepts and practices firmly entrenched in our current education system. Topics include: How learning actually changes the physical structure of the brain. How existing knowledge affects what people notice and how they learn. What the thought processes of experts tell us about how to teach. The amazing learning potential of infants. The relationship of classroom learning and everyday settings of community and workplace. Learning needs and opportunities for teachers. A realistic look at the role of technology in education.
