Interventional Critical Care - Dennis A. Taylor 2021-07-19

The goal of the first edition of Interventional Critical Care: A Manual for
Advanced Care Practitioners was to fill a knowledge gap of the advanced
practice provider (APP) specifically regarding the skills and
understanding of critical care procedures in response to the rapidly
expanding participation of APPs in critical care. Written by experts in the
field, this successor edition adds to the content of the first by expanding
upon ultrasonography areas to include more direct hemodynamic
evaluations as well as the newer "e"FAST. It also explores the specialty
of Urology to include more complex interventions. As billing and coding
are necessary, the authors added appropriate CPT codes for each of the
appropriate chapters. Most chapters have been completely re-written
and updated from the first edition and have different authors – thereby a
different perspective and experience level. Interventional Critical Care
2nd Edition serves as a valuable reference for physicians and advanced
practice providers in daily practice in the ICU, OR and/or ED setting.

Back To Basics - Orchid Lee Lopez 2011-02-15

As a registered nurse for the last 28 years, my primary clinical expertise has been working in the pre-hospital environment as a flight nurse and a paramedic, as well as continuing to work in a variety of clinical areas which include the emergency department, pediatrics and endoscopy. My extensive clinical background has also given me the opportunity to work as a legal nurse consultant with one of the largest law firms in Arizona. As an EMS educator and program director of paramedic training programs for the last 20 years and most recently as the National Clinical Educator for one of the largest air medical transport companies, I truly enjoy teaching in a simple manner as to assure that students do have a strong basic understanding in making critical care decisions and that they will be providing the highest quality of patient care beginning from the least to the most invasive management of care for the patients they are transporting. My goal as a professional and as an EMS educator has always been and will continue to encourage students to have the desire to learn and grow in their profession, as well as contribute to EMS in a way that inspires positive change.
