Beyond the Mirror - Olha Vorodyukhina 2022-11-09

The benefits of looking good go much further than “skin deep”. Ask yourself, how many times you have looked in the mirror put a finger on both sides of your face and lifted out the lines that are slowly appearing around your mouth and thought, ‘wouldn’t it be lovely to have a little help’. Maybe you’ve thought ‘I’ll do this now

and I’ll call the clinic I’ve seen advertised, book an appointment and go to have some work done’? It’s not a decision that most would make lightly, considering how to choose the right clinic, whether they have the time, money and motivation to commit to the thought. There may even be the little niggle in the back of their mind that they could in fact age positively with just a little help and advice. This is a book that supports everyone who wants the truth from the experts, but also everyday people who are not celebrities or influencers, to help them make the right choices for themselves.

Integrated Procedures in Facial Cosmetic Surgery -

Seied Omid Keyhan 2022-06-17

Physical attractiveness of the face has a significant impact on the social life and daily interaction of individuals as well as one's general perception of life. Proper surgical planning for aesthetic facial surgery requires a meticulous analysis of the patient's current and desired facial features from the perspective of both soft and hard tissues. Significantly greater changes to facial aesthetics can be made via the alteration of the main bony structures of the face than by alteration of soft tissue and skin alone. Various surgical and clinical techniques are available for the augmentation, reduction or refinement of the most prominent aspects of facial aesthetics, such as alterations to the cheek, chin, nose, para-nasal area, as well as the angle of the jaw. These techniques can be categorized as office-based or non-invasive

techniques (filler injections, facial liposculpture or liposuction to modify the soft tissue of the face) and invasive surgical interventions such as facial prosthesis and maxillofacial osteotomies. In order to achieve the optimum aesthetic results for patients who undergo bi-maxillary or mono-maxillary orthognathic surgery, it is of paramount importance to utilize a hard and soft-tissue integrated approach. These integrated approaches have utilized the latest techniques in 3-dimensional printing, computer-assisted surgery, tissue engineering and stem-cell therapy in order to achieve positive and lasting outcomes. Integrated Procedures in Facial Cosmetic Surgery includes chapters that focus on facial analysis and clinical evaluation and best practices in surgical techniques such as: principles of bone contouring; genioplasty; mentoplasty; malarplasty; rhinoplasty; orthognathic surgery and intra-oral plastic surgery; lifting procedures like blepharoplasty;

surgical approaches to cleft lip and palate surgery; as well as the principles of facial photography. Written by a team of renowned international experts, this textbook features over 900 original photographs, fully illustrating each procedure in a stepwise manner. Integrated Procedures in Facial Cosmetic Surgery is an essential companion for oral and maxillofacial surgeons, plastic surgeons and otolaryngologists, as well as for cosmetic surgeons and clinical residents dealing with face rejuvenation. Its contents will also be of interest to dentists, prosthodontists, periodontists, radiologists, general surgeons, and dermatologists.

Face Anatomy - Andrea Alessandrini 2015-01-01

A MEDICAL BOOK THAT IS RICH ON IMAGES AND INFORMATION SPECIFICALLY ELABORATED FOR AND AIMED AT THOSE PROFESSIONALS

SPECIALIZING IN AESTHETIC CORRECTIONS OF THE FACE

- I dedicate this text, which is the result of many years of work, to all those who, like me, operate in the wonderful world of Aesthetic Medicine and Surgery. For a better understanding of the text, it is useful for me to illustrate my professional past.
- It was 1982 when I injected my first phial of filler: it was bovine collagen.
- From the initial small corrections, which I effected overcoming fears and worries, I performed wider corrections in various areas of the face, acquiring more and more confidence and awareness about what I was doing (this confidence was due to my

knowledge of anatomy, without which I would have felt "naked"). • Now, in 2014, I still am, as I have always been in all this time, in search of slightly invasive techniques, more and more consolidating my knowledge in order to obtain the best and above all the most natural results. • I held, and am still holding, courses in various parts of the world, proposing to my colleagues all my knowledge acquired in these years, in particular the secrets, the points of attention, the correct therapeutic approach, the global vision of problems and possible limits. All that with the aim of working correctly and reaching the utmost results. • I take part in national and international congresses, where I illustrate my techniques and the new approaches in the field and I compare the colleagues' experiences with mine with the humbleness of a person who is always willing to learn. • My experience, acquired also through teaching on corpses, has led me not only to a deeper

knowledge of anatomy, but also to developing new personal techniques. • In consequence of the continuous and appreciated request of material for consultation by Italian and foreign colleagues, I decided to undertake the onerous project of presenting, in this first volume, the anatomy and the noble structures, of which we must have a specific knowledge in order to better understand and assimilate the operative guide-lines used by me, which are going to be dealt with in the second volume. • This text has some peculiar characteristics that can be synthesized in two words: clarity and immediateness in consultation. As we well know, in order to be able to undertake a targeted therapeutic program, regardless of the substance used, a deep knowledge of the anatomy of the face is needed. *Midfacial Rejuvenation* - Morris E.
