**Mental Health Research in Asia and the Pacific** - William A. Caudill - 1969

This volume is the result of a conference on mental health research in Asia and the Pacific held at the East-West Center, University of Hawaii, in 1966, at which a distinguished multidisciplinary group of investigators from Australasia, Europe, and North America explored such questions as how Asian countries had made use of Western psychiatric theories and techniques to understand similarities and differences in behavior in cross-cultural settings, as well as attempted to reach some agreement on common denominators in human behavior regardless of cultural differences. The editors, Dr. William Caudill, a social anthropologist, and Dr. Tsung-yi Lin, a psychiatric epidemiologist, both of whom participated in the conference, have done an admirable job of organizing the work of their colleagues (and keeping their opinions from intruding) into three topical sections which present the proceedings and discussion in such a way as to be most helpful and economical to the reader.

**Neuropsychiatric Disorders** - Koho Miyoshi - 2010-08-09

Around the world societies are facing growing aging populations with the concomitant increase in neuropsychiatric disorders. interrelationship between behavior and brain function from a variety of perspectives, including those of psychology, neurology, and psychiatry. This concise and updated monograph comprises the latest findings in the field and includes chapters on delusional symptoms, mood disorders and neurotic symptoms, cognitive impairment, behavioral and personality changes, and recently, cerebral alterations revealed in PTSD patients and in endogenous psychoses through neuroimaging and neuropathology. These findings will certainly widen the realm of neuropsychiatry going forward and will prove of great value to specialists as well as to academics and trainees in neurology, psychiatry, neuropsychology, neuroradiology, neuropathology, neurophysiology, neurochemistry, and clinical genetics. Ultimately, neuropsychiatry aims to prevent and reduce the suffering of individuals with the psychiatric symptoms of cerebral disorders.

**Psychiatry for Neurologists** - Dilip V. Jeste - 2007-11-05

A panel of international psychiatrists, neurologists, clinical psychologists, and neuropsychiatrists review for the clinical neurologist those aspects of psychiatry that impact the management of neurological disorders. On the one hand, the authors illuminate the neurological aspects of such psychiatric disorders as depression, anxiety disorders, schizophrenia, hysteria, catatonia, addictions, and personality disorders. On the other hand, they also explain in detail the psychiatric evaluation of the neurological patient and discuss the behavioral aspects of the major neurological disorders, including psychiatric complications of dementia and stroke, neuromuscular disorders, the psychiatric aspects of Parkinson's disease, epilepsy, Huntington's disease, Tourette's syndrome, and multiple sclerosis. Comprehensive and timely, Psychiatry for Neurologists helps to close the artificial gap separating neurology and psychiatry so that neurologists feel comfortable managing the psychiatric aspects of the neurological disorders they treat.

**Diagnosis and Management of Dementia** - Gordon K. Wilcock - 1999

Organised services for those with memory disorders are growing. This growth is stimulated by an increase in the number of people with memory problems and by an increased appreciation of the complexity of the needs of such patients. Further growth is likely, especially now that we appear to have crossed the threshold of effective treatment for many patients with dementia. With these advances has come the recognition of the necessity for an interdisciplinary approach to management. *Diagnosis and Management of Dementia: A Manual for Memory Disorders Teams* is an edited volume covering all aspects of the operation of a memory disorders team. It is aimed at all those working in the dementia or memory disorders team, whether in a clinic or a community setting. The book is divided into three sections. Section one takes the reader through the practical details of setting up and organising a clinic, from timetabling, through managing information, to the assessments needed and the opportunities such a service provides. Section two deals with the diagnostic process; and section three addresses management issues, from carer support, pharmacological and physiological interventions, through managing common problems, to the role of the primary care physician. An Appendix contains the results of a survey to the memory disorder services. This survey provides the reader with examples of other services and demonstrates the wide variation in how these services operate. The Manual is unique in that it combines up to date thinking on diagnosis and management with practical and helpful ideas on how to run a dementia or memory disorders service.
