The 2015 edition of the Uniform Mechanical  
Code (UMC©) represents the most current  
approaches in the mechanical field. It is the  
fourth edition developed under the ANSI  
Consensus process is designated as an American  
National Standards by the American National  
Standards Institute (ANSI). Contributions to the  
content of this code were made by every  
segment of the built industry, including such  
diverse interests as consumers, enforcing  
authorities, installers/maintainers, labor,  
manufacturers, research/standards/ testing  
laboratories, special experts and users.

### **Brown Acres - Anna Sklar 2008**

With more than 250 photographs and rare  
ephemera, all collected by author Tom  
Zimmerman, *Paradise Promoted* is the first book  
to showcase the era from 1870 to 1930, when  
boosters developed the small town of Los  
Angeles into the city that would become  
Americas most cutting-edge metropolis. Los  
Angeles was the subject of the longest, loudest,  
most persistent promotional campaign in the  
history of the United States. Nothing was too  
exaggerated, absurd, or flat-out bizarre to be  
fodder for the relentless effort to convince  
Americans to slam the door forever on their  
home and sally forth to what booster supreme  
G.W. Burton called *The fairest daughter among  
the sisterhood of cities in the world*. This  
material that was meant to be cast away--  
ephemeral advertising and promotional pieces --  
tells the complete story of how the Los Angeles  
Chamber of Commerce, the railroads, the

speculators, business moguls and the  
Automobile Club wooed the world west.

### **International Building Code 2018 -**

International Code Council 2017

This code applies to all buildings except  
detached one- and two-family dwellings and  
townhouses up to three stories. The 2018 IBC  
contains many important changes such as:  
Accessory storage spaces of any size are now  
permitted to be classified as part of the  
occupancy to which they are accessory. New  
code sections have been introduced addressing  
medical gas systems and higher education  
laboratories. Use of fire walls to create separate  
buildings is now limited to only the  
determination of permissible types of  
construction based on allowable building area  
and height. Where an elevator hoistway door  
opens into a fire-resistance-rated corridor, the  
opening must be protected in a manner to  
address smoke intrusion into the hoistway. The  
occupant load factor for business uses has been  
revised to one occupant per 150 square feet.  
Live loads on decks and balconies increase the  
deck live load to one and one-half times the live  
load of the area served. The minimum lateral  
load that fire walls are required to resist is five  
pounds per square foot. Wind speed maps  
updated, including maps for the state of Hawaii.  
Terminology describing wind speeds has  
changed again with ultimate design wind speeds  
now called basic design wind speeds. Site soil  
coefficients now correspond to the newest  
generation of ground motion attenuation  
equations (seismic values). Five-foot tall wood  
trusses requiring permanent bracing must have  
a periodic special inspection to verify that the  
required bracing has been installed. New  
alternative fastener schedule for construction of  
mechanically laminated decking is added giving  
equivalent power-driven fasteners for the 20-  
penny nail. Solid sawn lumber header and girder  
spans for the exterior bearing walls reduce span  
lengths to allow #2 Southern Pine design values.
