**Rethinking Substance Abuse** - William R. Miller 2011-08-18

While knowledge on substance abuse and addictions is expanding rapidly, clinical practice still lags behind. This book brings together leading experts to describe what treatment and prevention would look like if it were based on the best science available. The volume incorporates developmental, neurobiological, genetic, behavioral, and social-environmental perspectives. Tightly edited chapters summarize current thinking on the nature and causes of alcohol and other drug problems; discuss what works at the individual, family, and societal levels; and offer robust principles for developing more effective treatments and services.

**The Future of the Public's Health in the 21st Century** - Institute of Medicine 2003-02-01

The anthrax incidents following the 9/11 terrorist attacks put the spotlight on the nation's public health agencies, placing it under an unprecedented scrutiny that added new dimensions to the complex issues considered in this report. The Future of the Public's Health in the 21st Century reaffirms the vision of Healthy People 2010, and outlines a systems approach to assuring the nation's health in practice, research, and policy. This approach focuses on joining the unique resources and perspectives of diverse sectors and entities and challenges these groups to work in a concerted, strategic way to promote and protect the public's health. Focusing on diverse partnerships as the framework for public health, the book discusses: The need for a shift from an individual to a population-based approach in practice, research, policy, and community engagement. The status of the governmental public health infrastructure and what needs to be improved, including its interface with the health care delivery system. The roles nongovernment actors, such as academia, business, local communities and the media can play in creating a healthy nation. Providing an accessible analysis, this book will be important to public health policy-makers and practitioners, business and community leaders, health advocates, educators and journalists.

Elder Law in Maryland 4th Edition - Jason A. Frank 2021-12-03

Encompasses Uniform Federal Law and the Unique Aspects of Maryland

Law Even more than most areas of the law, elder law tends to be state specific. In Maryland, long-term medical care regulations, health care decision making, and guardianship are just a few of the areas in which state law cannot be subsumed in general statements of majority rules or hornbook law. Yet, at the same time, uniform federal law governs Social Security issues and various consumer protection statutes and housing assistance programs. Elder Law in Maryland provides guidance to both applicable federal law and the unique aspects of Maryland elder law. Practical, Comprehensive Guidance for the Maryland Practitioner In a single, concise volume, Elder Law in Maryland accurately renders elder law as it currently exists in Maryland. It addresses the nexus between senior citizens and the law at those points most relevant to the legal practitioner specifically and to those serving seniors generally. Using this book as a guide, you can feel confident that you are considering all the options when planning for medical, financial, and quality of life decisions. In keeping with its practical focus, Elder Law in Maryland contains forms and documents conforming to Maryland law, texts of landmark cases, and checklists of essential elements for both office and courtroom.

**Implementing High-Quality Primary Care** - National Academies of Sciences, Engineering, and Medicine 2021-06-30

High-quality primary care is the foundation of the health care system. It provides continuous, person-centered, relationship-based care that considers the needs and preferences of individuals, families, and communities. Without access to high-quality primary care, minor health problems can spiral into chronic disease, chronic disease management becomes difficult and uncoordinated, visits to emergency departments increase, preventive care lags, and health care spending soars to unsustainable levels. Unequal access to primary care remains a concern, and the COVID-19 pandemic amplified pervasive economic, mental health, and social health disparities that ubiquitous, high-quality primary care might have reduced. Primary care is the only health care component where an increased supply is associated with better population health and more equitable outcomes. For this reason, primary care is a common good, which makes the strength and quality of the country's primary care services a public concern. Implementing High-Quality Primary Care: Rebuilding the Foundation of Health Care puts forth an evidence-based plan with actionable objectives and recommendations for implementing high-quality primary care in the United States. The implementation plan of this report balances national needs for scalable solutions while allowing for adaptations to meet local needs.

*Investing in the Health and Well-Being of Young Adults* - National Research Council 2015-01-27

Young adulthood - ages approximately 18 to 26 - is a critical period of development with long-lasting implications for a person's economic security, health and well-being. Young adults are key contributors to the nation's workforce and military services and, since many are parents, to the healthy development of the next generation. Although 'millennials' have received attention in the popular media in recent years, young adults are too rarely treated as a distinct population in policy, programs, and research. Instead, they are often grouped with adolescents or, more often, with all adults. Currently, the nation is experiencing economic restructuring, widening inequality, a rapidly rising ratio of older adults, and an increasingly diverse population. The possible transformative effects of these features make focus on young adults especially important. A systematic approach to understanding and responding to the unique circumstances and needs of today's young adults can help to pave the way to a more productive and equitable tomorrow for young adults in particular and our society at large. *Investing in The Health and Well-Being of Young Adults* describes what is meant by the term young adulthood, who young adults are, what they are doing, and what they need. This study recommends actions that nonprofit programs and federal, state, and local agencies can take to help young adults make a successful transition from adolescence to adulthood. According to this report, young adults should be considered as a separate group from adolescents and older adults. *Investing in The Health and Well-Being of Young Adults* makes the case that increased efforts to improve high school and college graduate rates and education and workforce development systems that are more closely tied to high-demand economic sectors will help this age group achieve greater opportunity and success. The report also discusses the health status of young adults and makes recommendations to develop evidence-based practices for young adults for medical and behavioral health, including preventions. What happens during the young adult years has profound implications for the rest of the life course, and the stability and progress of society at large depends on how any cohort of young adults fares as a whole. *Investing in The Health and Well-Being of Young Adults* will provide a roadmap to improving outcomes for this age group as they transition from adolescence to adulthood.

**Treatment for Posttraumatic Stress Disorder in Military and Veteran Populations** - Institute of Medicine 2012-07-22

Prior to the military conflicts in Iraq and Afghanistan, wars and conflicts have been characterized by such injuries as infectious diseases and catastrophic gunshot wounds. However, the signature injuries sustained by United States military personnel in these most recent conflicts are blast wounds and the psychiatric consequences to combat, particularly posttraumatic stress disorder (PTSD), which affects an estimated 13 to 20 percent of U.S. service members who have fought in Iraq or Afghanistan since 2001. PTSD is triggered by a specific traumatic event - including combat - which leads to symptoms such as persistent re-experiencing of the event; emotional numbing or avoidance of thoughts, feelings, conversations, or places associated with the trauma; and hyperarousal, such as exaggerated startle responses or difficulty concentrating. As the U.S. reduces its military involvement in the Middle East, the Departments of Defense (DoD) and Veterans Affairs (VA) anticipate that increasing numbers of returning veterans will need PTSD services. As a result, Congress asked the DoD, in consultation with the VA, to sponsor an IOM study to assess both departments' PTSD treatment programs and services. *Treatment for Posttraumatic Stress Disorder in Military and Veteran Populations: Initial Assessment* is the

first of two mandated reports examines some of the available programs to prevent, diagnose, treat, and rehabilitate those who have PTSD and encourages further research that can help to improve PTSD care.

*Evaluation of the Department of Veterans Affairs Mental Health Services* - National Academies of Sciences, Engineering, and Medicine 2018-03-29

Approximately 4 million U.S. service members took part in the wars in Afghanistan and Iraq. Shortly after troops started returning from their deployments, some active-duty service members and veterans began experiencing mental health problems. Given the stressors associated with war, it is not surprising that some service members developed such mental health conditions as posttraumatic stress disorder, depression, and substance use disorder. Subsequent epidemiologic studies conducted on military and veteran populations that served in the operations in Afghanistan and Iraq provided scientific evidence that those who fought were in fact being diagnosed with mental illnesses and experiencing mental health-related outcomes in particular, suicide at a higher rate than the general population. This report provides a comprehensive assessment of the quality, capacity, and access to mental health care services for veterans who served in the Armed Forces in Operation Enduring Freedom/Operation Iraqi Freedom/Operation New Dawn. It includes an analysis of not only the quality and capacity of mental health care services within the Department of Veterans Affairs, but also barriers faced by patients in utilizing those services.

Use their first-hand experience fighting for veterans' rights and their insider's view of the Department of Veterans Affairs to obtain the benefits your client earned. The *Veterans Benefits Manual* contains dozens of effective, battle-tested advocacy tips for veterans and advocates along with all the latest developments in veterans law. 2021-2022 Edition Editors: National Veterans Legal Services Program (NVLSP) Barton F. Stichman, Executive Director and co-founder of the National Veterans Legal Services Program Ronald B. Abrams, Special Counsel and Former Joint Executive Director of the National Veterans Legal Services Program Richard V. Spataro, Director of Training and Publications of the National Veterans Legal Services Program Stacy A. Tromble, Director of Court of Appeals for Veterans Claims Litigation of the National Veterans Legal Services Program The 2021-2022 edition of the *Veterans Benefits Manual* has been thoroughly updated with the important developments in veterans' law over the past year. The most significant new information in the recent edition of the Manual has been about the Veterans Appeals Improvement and Modernization Act of 2017 (AMA), which took effect on February 19, 2019. There is updated information in the 2021-2022 edition of the Manual about how the new modernized review system has

been operating in practice. Most of that information appears in Chapters 12, 13, and 16. Highlights of the other updates include advocacy essentials such as: New advice for deciding which options to pursue to overcome BVA decisions denying legacy claims and claims subject to the new AMA system (Sections 14.1.1 and 14.1.2); Discussion of the recent changes to VA policies and procedures due to the COVID-19 pandemic (throughout Manual); A new section about how the BVA conducts virtual hearings (Section 13.4.3); New sections explaining why thousands of Vietnam veterans and their survivors are now entitled to millions of dollars in additional retroactive compensation for Agent Orange-related diseases (Sections 8.10, 8.11); Discussion of the VA's revisions to the disability rating schedule for musculoskeletal conditions (Section 5.2.9); A new section discussing the enhanced hearing procedures adopted by the Army Discharge Review Board and the thousands of Army veterans now entitled to have the Board reconsider their less than Honorable Discharges under more liberal review standards (Section 21.3.5); A new section about how military retirees become entitled to retroactive military retired pay as a direct result of a VA decision granting retroactive VA benefits (Section 8.12); Updated analysis of the rules governing entitlement to retroactive benefits based on service department records being added to the VA claims file after a final claim denial (Section 8.8.9); New guidance regarding entitlement to accrued benefits to reimburse individuals who bore the expense of a veteran's last illness or burial (Section 7.3.1.1.2); and Updates on eligibility for VA's Comprehensive Assistance for Family Caregivers and advocacy tips for those applying for monthly stipends (Section 10.13). Updated information about the duty to assist activities transferred from the Joint Services Records Research Center to the VA Records Research Center (Section 18.4); Advocacy tips for appealing BVA decisions that violate or improperly rely on provisions of the VA Adjudication Procedures Manual M21-1 (Section 14.5.9); Discussion of the recent case law on extraschedular disability ratings and schedular ratings for ankylosis of joints (Sections 5.3 and 5.2.1.6);

*Price Setting and Price Regulation in Health Care* - OECD 2019-06-26

The objectives of this study are to describe experiences in price setting and how pricing has been used to attain better coverage, quality, financial protection, and health outcomes. It builds on newly commissioned case studies and lessons learned in calculating prices, negotiating with providers, and monitoring changes. Recognising that no single model is applicable to all settings, the study aimed to generate best practices and identify areas for future research, particularly in low- and middle-income settings. The report and the case studies were jointly developed by the OECD and the WHO Centre for Health Development in Kobe (Japan).

*The Impact of Health Insurance in Low- and Middle-Income Countries* - Maria-Luisa Escobar 2011-01-01

Over the past twenty years, many low- and middle-income countries have experimented with health insurance options. While their plans have varied widely in scale and ambition, their goals are the same: to make health services more affordable through the use of public subsidies while also moving care providers partially or fully into competitive markets. Colombia embarked in 1993 on a fifteen-year effort to cover its entire population with insurance, in combination with greater freedom to choose among providers. A decade later Mexico followed suit with a program tailored to its federal system. Several African nations have introduced new programs in the past decade, and many are testing options for reform. For the past twenty years, Eastern Europe has been shifting from government-run care to insurance-based competitive

systems, and both China and India have experimental programs to expand coverage. These nations are betting that insurance-based health care financing can increase the accessibility of services, increase providers' productivity, and change the population's health care use patterns, mirroring the development of health systems in most OECD countries. Until now, however, we have known little about the actual effects of these dramatic policy changes. Understanding the impact of health insurance-based care is key to the public policy debate of whether to extend insurance to low-income populations—and if so, how to do it—or to serve them through other means. Using recent household data, this book presents evidence of the impact of insurance programs in China, Colombia, Costa Rica, Ghana, Indonesia, Namibia, and Peru. The contributors also discuss potential design improvements that could increase impact. They provide innovative insights on improving the evaluation of health insurance reforms and on building a robust knowledge base to guide policy as other countries tackle the health insurance challenge.
