**Mapping the Journey** - Lorinda R. Rowledge  
2017-11-28

This illuminating new book presents a series of in-depth case studies from around the world based on numerous personal interviews with organizational leaders and focusing on their journey towards sustainability. The aim is to provide visions of a more sustainable future, and shed light on the path, milestones and solutions - in particular the management processes these organizations employed - to provide a reliable compass that others can follow. Although each organization must take steps to fit its particular circumstance, business conditions and culture, Mapping the Journey proves that valuable lessons can be learned by setting aside critique as to where these organizations may yet make progress and instead focusing on the guidelines,

targets, measures of success, tools and techniques and valuable wisdom about how pioneer organisations are travelling toward a prosperous, sustainable future. Each organization included has crafted its own unique strategic responses to an identified need for increased sustainability. While none can be said to have reached the end-point of a sustainable development strategy, all have found that, by addressing the challenge of sustainable industrial practices, they have found innovative solutions, new opportunities for revenue generation, better relationships with customers, new business and product opportunities and a boost to morale from the executive ranks to front-line employees. Mapping the Journey examines both public and private organizations worldwide: SJ Rail of Sweden; Sony Corporation; SC Johnson; TransAlta Corporation; Patagonia; Henkel; Volvo; ASG; Interface Flooring Systems; Suncor; DaimlerChrysler; AssiDoman; Germany's Centre for Technology Assessment and the

Dutch National Environmental Policy Plan. These case studies provide an inspiring framework of effective processes for defining a sustainable development strategy and transforming it successfully into actions and results.

*Urbanization and Climate Co-Benefits* -  
Christopher N. H. Doll 2017-02-24

Urban areas are increasingly contributing to climate change while also suffering many of its impacts. Moreover, many cities, particularly in

developing countries, continue to struggle to provide services, infrastructure and socio-economic opportunities. How do we achieve the global goals on climate change and also make room for allowing global urban development? Increasing levels of awareness and engagement on climate change at the local level, coupled with recent global agreements on climate and development goals, as well as the New Urban Agenda emerging from Habitat III, present an unprecedented opportunity to radically rethink how we develop and manage our cities.

Urbanization and Climate Co-Benefits examines the main opportunities and challenges to the implementation of a co-benefits approach in urban areas. Drawing on the results of empirical research carried out in Brazil, China, Indonesia, South Africa, India and Japan, the book is divided into two parts. The first part uses a common framework to analyse co-benefits across the urban sectors. The second part examines the tools and legal and governance

perspectives at the local and international level that can help in planning for co-benefits. This book will be of great interest to students, practitioners and scholars of urban studies, climate/development policy and environmental studies.

*Driverless Cars, Urban Parking and Land Use* -  
Robert A. Simons 2020-02-21

The subject of driverless and even ownerless cars has the potential to be the most disruptive technology for real estate, land use, and parking since the invention of the elevator. This book includes new research and economic analysis, plus a thorough review of the current literature to pose and attempt to answer a number of important questions about the effect that driverless vehicles may have on land use in the United States, especially on parking. Simons outlines the history of disruptive technologies in transport and real estate before examining how the predicted changes brought in by the adoption of driverless technologies and decline in car ownership will affect our urban areas. What could we do with all the parking areas in our cities and our homes and institutional buildings that may no longer be required? Can

they be sustainably repurposed? Will self-driving cars become like horses, used only by hobbyists for recreation and sport? While the focus is on parking, the book also contains the views of real estate economists, architects, and policymakers and is essential reading for real estate developers and investors, transport economists, planners, politicians, and policymakers who need to consider the implications of a future with more driverless vehicles. Fasten your seat belt: like it or not, driverless cars will begin to change the way we move about our cities within ten years.
